Why does a Grandfather Clock Stop Working? Often, the works are dirty, need oiling, or, most likely, both. When the clock stops, think of it as “the oil light is on”. It’s a “cry for help”. Without oil, the metal parts grind on each other, causing serious wear and damage. Oil also attracts dust which can make the oil “gummy” and add drag to its operation until it can no longer overcome the friction. If a clock is oiled regularly [every three to five years], chances are you will only ever need to re-oil your clock. If the clock is allowed to run until it stops, the only sure way to service it is to remove the works from its case, dismantle the parts, clean, service, and put the movement back together with fresh oil and correct adjustment.

Este libro lo tomará de la mano en cada paso del camino y lo guiará hacia el éxito. PUEDES HACERLO. ¿Por qué deja de funcionar un reloj de cuco? Lo más probable es que se deba a que las obras están sucias, necesitan lubricación o, muy probablemente, ambas cosas. Cuando el reloj se detiene, piense en ello como "la luz del aceite está encendida". Es un "grito de ayuda". Sin aceite, las piezas metálicas se muelen entre sí provocando un desgaste y daños graves. El aceite también atrae el polvo que puede hacer que el aceite se vuelva "gomoso" y agregue resistencia a su funcionamiento hasta que ya no pueda superar la fricción. Si un reloj se aceita con regularidad [cada tres o cinco años], es probable que solo necesite volver a aceitarlo. Si se permite que el reloj funcione hasta que se detenga, la única forma segura de repararlo es sacar las piezas de su caja, desmontar las piezas, limpiar, reparar y volver a montar el movimiento con aceite nuevo y el ajuste correcto. Este libro le enseñará cómo hacer todo esto. Cubierto: Regula, Baduf, Hubert Herr, Schatz, Rack & Snail, rueda de conteo, fuelles y pesos, identificación de movimiento, limpieza y engrase, procedimiento de reparación paso a paso completo.
