The model is designed with the consideration of low mass, low price and good quality in Solid Edge ST3. This AMT model is designed as three subsystems, which are Dual Clutch, Direct Shift Gearbox, and Differential Gearbox. The AMT system is developed by using MSC ADAM View 2011 software. In which, the AMT model has developed the performance with using simulation. The input parameter applied to AMT model which are kinematic and mechanism. The output analysis carried out as speed increment in different gear speed ratio, shifting period, and wheel turning speed (Left and Right turn).
