Edwards and John Magee published "Technical Analysis of Stock Trends" which is widely considered to be one of the seminal works of the discipline. It is exclusively concerned with trend analysis and chart patterns and remains in use to the present. As is obvious, early technical analysis was almost exclusively the analysis of

charts, because the processing power of computers was not available for statistical analysis. "Technical analysis" is a financial term used to denote a security analysis discipline for forecasting the direction of prices through the study of past market data, primarily price and volume. Behavioral economics and quantitative analysis incorporate technical analysis, which being an aspect of active management stands in contradiction to much of modern portfolio theory. In the decades since its initial publication in German in 1978, *Polychrome Sculpture* has come to be widely regarded as a watershed text on the making and meaning of European medieval and Baroque painted wood sculpture. An early proponent of interdisciplinary research, Johannes Taubert played a pioneering role in combining the rigorous scientific analysis of materials with a fuller understanding of form and function, an approach that has led to the development of technical art history as practiced today. Many of the essays in this volume apply such scientific techniques as microscopic analysis to an art-historical understanding of Romanesque and late Gothic wood sculpture, revealing that, far from serving a merely decorative function, the

painted surface of these works was intricately connected to their meaning. The paint layers on the sculptures, for example, which the author spent years documenting through close examination and analysis, were intended to impart a heightened sense of reality to the life-sized sculptures, thereby enhancing the viewer's experience of worship. Taubert believed it was crucial for conservators to understand this context before undertaking any treatments. No other book offers such a focused, subtle, and interdisciplinary examination of the subject as *Polychrome Sculpture*. This influential work is now available in English for the first time, in a meticulous translation enhanced and updated by new color illustrations, annotations to the original text, and a new introduction. Composite materials are heterogeneous by nature, and are intended to be, since only the combination of different constituent materials can give them the desired combination of low weight, stiffness and strength. At present, the knowledge has advanced to a level that materials can be tailored to exhibit certain, required properties. At the same time, the fact that these materials are composed of various, sometimes very different constituents, make their mechanical behaviour complex. This observation holds with respect to the deformation behaviour, but especially with respect to the failure behaviour, where complicated and unconventional failure modes have been observed. It is a challenge to develop predictive methods that can capture this complex mechanical behaviour, either using analytical tools, or using numerical methods, the finite element method being the most widespread among the latter. In this respect,

developments have gone fast over the past decade. Indeed, we have seen a paradigm shift in computational approaches to (composite) material behaviour. Where only a decade ago it was still customary to carry out analyses of deformation and failure at a macroscopic level of observation only – one may call this a phenomenological approach – nowadays this approach is being progressively replaced by multiscale methods. In such methods it is recognized a priori that the overall behaviour is highly dependent on local details and laws. - With a preface by Mark Blaisse, author of *Before They Passed Away*, this book picks out one street in 200 different cities across the 7 continents -By means of infographics and a short text, the street becomes a symbol for a culture, a country in its entirety -Seven years of travel were needed to make this book -With a focus on detailed street knowledge, this is the perfect gift for travelers and photography enthusiasts alike 200 countries; one street each; seven years of

traveling and collecting photos, stories, facts and figures about each country. This is not just another photography book. It reveals everything that a street means to society: education, wisdom, youth, experience, happiness, stories, food, and so much more. This is the raw material of life, drawn directly from the experiences of the Belgian photographer Jeroen Swolfs. Seeing the street as a unifying theme, he traveled in search of that one street in each place - sometimes by a harbor or a railway station - that comprised the country as a whole. Each stunning image conveys culture, colors, rituals, even the history of the city and country where he found them. Swolfs sees the street as a universal meeting place, a platform of crowds, a center of news and gossip, a place of work, and a playground for children. Indeed, Swolfs's streets are a matrix for community; his photographs are published at a time when the unique insularity of local communities everywhere has never been more under threat.
