Lindeburg PE's FE Chemical Review Manual offers complete review for the NCEES FE Chemical exam. This book is intended to guide you through the Chemical Fundamentals of Engineering (FE) examination body of knowledge and the idiosyncrasies of the National Council of Examiners for Engineers and Surveyors (NCEES) FE Reference Handbook (NCEES Handbook). This book is not intended as a reference book, because you cannot use it while taking the FE examination. The only reference you may use is the NCEES Handbook. However, the NCEES Handbook is not intended as a teaching tool, nor is it an easy document to use. The NCEES Handbook was never intended to be something you study or learn from, or to have value as anything other than an examday compilation. Many of its features may distract you because they differ from what you were expecting, were exposed to, or what you currently use. To effectively use the NCEES Handbook, you must become familiar with its features, no matter how odd they may seem. FE Chemical Review Manual will help you become familiar with the format, layout, organization, and odd conventions of the NCEES Handbook. This book, which displays the NCEES Handbook material in blue for easy identification, satisfies two important needs: it is (1) something to learn from, and (2) something to help you become familiar with the NCEES Handbook. Topics Covered Chemical Reaction Engineering Chemistry Computational Tools Engineering Sciences Ethics and Professional Practice Fluid Mechanics/Dynamics Heat Transfer Mass Transfer and Separation Material/Energy Balances Materials Science Mathematics

It is the result of a unique cooperation between experts from more than 60 institutes in 12 European countries, brought together by the ECAT (European Concerted Action on Thrombosis and Disabilities) under the auspices of the Commission of the European Communities in Brussels, Belgium. The ECAT, which was initiated in 1981, designed and performed three prospective clinical studies to establish haemostatic factors as risk indicators of thrombosis. Included were patients with angina pectoris at risk from myocardial infarction, patients undergoing angioplasty at risk from re-stenosis, and patients receiving hip replacement at risk from deep venous thrombosis. Assay procedures were chosen, training courses for technicians held, and essential reagents were supplied from a central source. A quality control assessment scheme served to compare assay results both within and between laboratories. In the angina pectoris study, centres determined most of the assays locally; in the other two studies assays were performed centrally. The need for further quality assessment in Europe Dr J. F. Davidson in Glasgow, led to a separate activity coordinated by including coagulation inhibitors and plasminogen as risk factors for familial venous thrombosis. The Editors hope the ECAT Assay Procedures book will contribute to further harmonization of haemostasis assays, and ultimately to their standardization.
