Online version: Technical papers portion of the SAE Digital Library references thousands of SAE Technical Papers covering the latest advances and research in all areas of mobility engineering including ground vehicle, aerospace, off-highway, and manufacturing technology. Sample coverage includes fuels and lubricants, emissions, electronics, brakes, restraint systems, noise, engines, materials, lighting, and more. Your SAE service includes detailed summaries, complete documents in PDF, plus document storage and maintenance This Is The First Indian Publication Devoted Solely To Stepper Motors. It Covers All Aspects Of Stepper Motors: Construction, Operation And Characteristics Of Stepper Motors; Electronic As Well As Microprocessor Based Controllers For Stepper Motors; Stepper Motor Applications In Control, Instrumentation, Computer Peripheral Devices, Cnc Systems, Robotics, Etc.; And Stepper Motor Analysis And Design. Furthermore, The Book Contains Certain Special Features Which Have Appeared, Perhaps For The First Time, In A Book Of This Nature Such As The Latest Remp Disk Magnet Stepper Motor Micros-Tepping Controller, Etc. Certain Indian Contributions To Stepper Motor Controller Technology Have Been Highlighted In Microprocessor-Based Controllers For Stepper Motor. For Practising Engineers And Students, Selection And Sizing Of Stepper Motor Has Been Discussed In Detail And Illustrated With Typical Illustrative Examples. Managerial Accounting provides students with a clear introduction to fundamental managerial accounting concepts. One of the major goals of this product is to orient students to the application of accounting principles and techniques in practice. By providing students with numerous opportunities for practice with a focus on real-world companies, students are better prepared as decision makers in the contemporary business world. The noise and transparency created by the internet makes it harder to recruit the right people. This second edition will help you become the recruiter that candidates trust and want to talk to. The Robot-Proof Recruiter shows you how to use a human-first approach to hiring that will help you grab and hold a candidate's attention better than a robot! It contains essential guidance on overcoming obstacles, including how to recruit without an existing online presence, how to work effectively with hiring managers to improve the outreach and candidate experience, and how to use technology to support the candidate's journey from initial outreach, through to application, successful onboarding, and later to alumnus. The second edition covers the unexpected impact of the COVID-19 pandemic on recruiting, and how using unique human qualities in conjunction with technology can enhance employer branding and candidate experience. Full of expert guidance, practical tips and updated case studies, this book explains what works, what doesn't and how you can stand out and recruit effectively. The Robot-Proof Recruiter is an indispensable book for all recruitment professionals and HR practitioners who want to recruit the right people for their organization. Mastering Cloud Computing is designed for undergraduate students learning to develop cloud computing applications. Tomorrow's applications won't live on a single computer but will be deployed from and reside on a virtual server, accessible anywhere, any time. Tomorrow's application developers need to understand the requirements of building apps for these virtual systems, including concurrent programming, high-performance computing, and data-intensive systems. The book introduces the principles of distributed and parallel computing underlying cloud architectures and specifically focuses on virtualization, thread programming, task programming, and map-reduce programming. There are examples demonstrating all of these and more, with exercises and labs throughout. Explains how to make design choices and tradeoffs to consider when building applications to run in a virtual cloud environment Real-world case studies include scientific, business, and energy-efficiency considerations The Database and Expert Systems Applications (DEXA) conferences bring together researchers and practitioners from all over the world to exchange ideas, experiences and opinions in a friendly and stimulating environment. The papers are at once a record of what has been achieved and the first steps towards shaping the future of information systems. DEXA covers a broad field, and all aspects of database, knowledge base and related technologies and their applications are represented. Once again there were a good number of submissions: 241 papers were submitted and of these the programme committee selected 103 to be presented. DEXA'99 took place in Florence and was the tenth conference in the series, following events in Vienna, Berlin, Valencia, Prague, Athens, London, Zurich, Toulouse and Vienna. The decade has seen many developments in the areas covered by DEXA, developments in which DEXA has played its part. I would like to express thanks to all the institutions which have actively supported and made possible this conference, namely: • University of Florence, Italy • IDG CNR, Italy • FAW - University of Linz, Austria • Austrian Computer Society • DEXA Association In addition, we must thank all the people who have contributed their time and effort to make the conference possible. Special thanks go to Maria Schweikert (Technical University of Vienna), M. Neubauer and G. Wagner (FAW, University of Linz). We must also thank all the members of the programme committee, whose careful reviews are important to the quality of the conference. The founder and executive chairman of the World Economic Forum on how the impending technological revolution will change our lives We are on the brink of the Fourth Industrial Revolution. And this one will be unlike any other in human history. Characterized by new technologies fusing the physical, digital and biological worlds, the Fourth Industrial Revolution will impact all disciplines, economies and industries - and it will do so at an unprecedented rate. World Economic Forum data predicts that by 2025 we will see: commercial use of nanomaterials 200 times stronger than steel and a million times thinner than human hair; the first transplant of a 3D-printed liver; 10% of all cars on US roads being driverless; and much more besides. In The Fourth Industrial Revolution, Schwab outlines the key technologies driving this revolution, discusses the major impacts on governments, businesses, civil society and individuals, and offers bold ideas for what can be done to shape a better future for all. From the critically acclaimed author of Motor City, Detroit comes alive in a powerful and thrilling novel set amidst the chaos of the race riots and the serenity of Opening Day. Willie Bledsoe, once an idealistic young black activist, is now a burnt-out case. After leaving a snug berth at Tuskegee Institute to join the Student Nonviolent Coordinating Committee, he has become bitterly disillusioned with the civil rights movement and its leaders. He returns home to Alabama to try to write a memoir about his time in the cultural whirlwind, but the words fail to come. The surprise return of his Vietnam veteran brother in the spring of 1967 gives Willie a chance to drive a load of smuggled guns to the Motor City - and make enough money to jump-start his

stalled dream of writing his movement memoir. There, at Tiger Stadium on Opening Day of the 1968 baseball season - postponed two days in deference to the funeral of Martin Luther King, Jr. - Willie learns some terrifying news: the Detroit police are still investigating the last unsolved murder from the bloody, apocalyptic riot of the previous summer, and a white cop named Frank Doyle will not rest until the case is solved. And Willie is his prime suspect. Bill Morris's rich and thrilling new novel sets Doyle's hunt amid the history of one of America's most tortured and fascinating cities, as Doyle and Willie struggle with Detroit's deep racial divide, with revenge and forgiveness - and with the realization that justice is rarely attainable, and rarely just. To get the career you want, you need to be job-ready. This is your all-in-one guide to understanding what employers want and how to prepare yourself with a personal career plan. From gaining work experience, to mastering essential skills and acing the application process, The Job-Ready Guide is a complete resource for standing out from the crowd and getting a job offer. It shows you how to build a strong CV, write an impressive cover letter, excel at interviews, and cultivate the professionalism that employers want. Moving from education into the workplace can be a challenge: the world of work demands skills that you may never have had to truly use - or think about - before. The Job-Ready Guide will help you to boost your employability, covering everything you need to prepare for and start a successful career. You'll be able to conduct a systematic job search, learn how to network and develop a personal brand online, as well as hone valuable skills including leadership, teamwork, creativity and problem-solving. A highly practical, hands-on guide, this book is packed with useful features, including interactive exercises to help you in your real life; insider advice from employers; and tips from professionals at different stages in their careers who reveal 'what they wish they'd known'. Vol. 7, 9-11, 14-19 include interpretations 1-34. The global hydraulic (Fluid Power) product market is booming. It is a multi billion dollar industry spanning all across the world. There is hardly any industry, where fluid power application does not exist. Each and every application has a Pump involved and many cases a hydraulic motor too. Therefore, the global field population of Hydraulic Pumps and Motors is enormous. There are numerous Hydraulic Pump and Motor manufacturers in the world, in all the continents. The significant of them has been mentioned in this book. United States of America is the largest producer of hydraulic Pumps and Motors. The Fluid power industry involves millions of Jobs across the Globe. User base market for hydraulic pumps and motors are almost unlimited. Vocational and engineering schools barely mention Fluid Power application and usage of hydraulic pumps and motors. This book is designed to help the engineering schools to baptize their students with hydraulic Pumps and Motors and the industry as a whole. The book will put in touch the students with the actual pump and motor and their many applications. For those who are in Fluid Power industry, the book will provide variety of applications where hydraulic pumps and motors are profusely used. In a rapidly changing world, there is an ever-increasing need to monitor the Earth's resources and manage it sustainably for future generations. Earth observation from satellites is critical to provide information required for informed and timely decision making in this regard. Satellite-based earth observation has advanced rapidly over the last 50 years, and there is a plethora of satellite sensors imaging the Earth at finer spatial and spectral resolutions as well as high temporal resolutions. The amount of data available for any single location on the Earth is now at the petabyte-scale. An ever-increasing capacity and computing power is needed to handle such large datasets. The Google Earth Engine (GEE) is a cloud-based computing platform that was established by Google to support such data processing. This facility allows for the storage, processing and analysis of spatial data using centralized high-power computing resources, allowing scientists, researchers, hobbyists and anyone else interested in such fields to mine this data and understand the changes occurring on the Earth's surface. This book presents research that applies the Google Earth Engine in mining, storing, retrieving and processing spatial data for a variety of applications that include vegetation monitoring, cropland mapping, ecosystem assessment, and gross primary productivity, among others. Datasets used range from coarse spatial resolution data, such as MODIS, to medium resolution datasets (Worldview -2), and the studies cover the entire globe at varying spatial and temporal scales. This book constitutes the thoroughly refereed post-conference proceedings of the 11th International Conference on Mobile Computing, Applications, and Services, MobiCASE 2020, held in Shanghai, China, in September 2020. The conference was held virtually due to the COVID-19 pandemic. The 15 full papers were carefully reviewed and selected from 49 submissions. The papers are organized in topical sections on mobile application and framework; mobile application with data analysis; and AI application. Electric Motor Drives and Its Applications with Simulation Practices provides comprehensive coverage of the concepts of electric motor drives and their applications, along with their simulation using MATLAB and other software tools. The book helps engineers and students improve their software skills by learning to simulate various electric drives and applications and assists with new ideas in the simulation of electrical, electronics and instrumentations systems. Covering power electronic converter fed drives and simulation model building using all possible software as well as the operation and relevant applications discussed, the book provides a number of examples and step-by-step procedures for successful implementation. Intended for engineers, students and research scholars in industry who are working in the field of power electronics and drives, this book provides a brief introduction to simulation software under different environments. Provides an in-depth analysis of Electric motors and drives, specifically focused on practical approaches Includes simulations of electric drives using best proven software tools like MATLAB and PSIM Details step-by-step approaches for creating and applying simulation of electric drives This book highlights recent research on intelligent systems and nature-inspired computing. It presents 130 selected papers from the 19th International Conference on Intelligent Systems Design and Applications (ISDA 2020), which was held online. The ISDA is a premier conference in the field of computational intelligence, and the latest installment brought together researchers, engineers and practitioners whose work involves intelligent systems and their applications in industry. Including contributions by authors from 40 countries, the book offers a valuable reference guide for all researchers, students and practitioners in the fields of Computer Science and Engineering. Job seekers are frustrated. Online job applications through job boards and employer sites are leading to dead ends. Why? Employers are closing the last chapter on the online application playbook. Inundated by online applications and hampered by computer systems that are unable to select viable candidates from the masses of applicants, employers are now using innovative strategies to recruit and screen candidates online. Advances in technology make the way jobs are found and filled online distinctly different from just a few years ago. Employers are scanning the Web using advanced tools to capture signals from LinkedIn, Facebook, and Twitter, among others, to recruit candidates. Based on leading Internet strategies, The Panic Free Job Search shows you how to get hired: By developing a professional, Web-savvy profile By leveraging the power of LinkedIn, Facebook, Twitter, Google+, VisualCV, YouTube, TubeMogul, and even your own Website By sending the right signals through social networking sites By tapping into the hidden job market Don't panic! You can get the job you want, even in this tough economy. This book is for both developer and decision makers of R/3 implementation teams who need to understand in-depth and practically the benefits, financial risks and technical backgrounds of IDocs and ALE in interface development. It describes the implementation of interfaces in an R/3 roll-out, important technologies such as RFC, OLE and Workflow and common standards like EDIFACT, ANSI X.12 or XML. A large number of recipes deliver templates as a starting point for own enhancements. It is for everybody who depends on fast and cost-effective solutions for EDI and it also discusses why many EDI projects are ten times as expensive as they could be. Preparing the reader with the essential knowledge to survive the outrageously fast growing world of data communication and ecommerce via internet and intranet, the book shows in a distilled manner how enterprises using R/3 can efficiently implement Electronic Data Interchange (EDI) both with external partner and with inhouse satellite systems. This book in the tradition of IT-cookbooks, where the reader will find quick recipes and reliable information to cover all aspects of SAP Interfacing and quickly became a standard work for the R/3 world.
