In Quest of the Deeper Self Jul 10 2021 "What doesn't kill me only makes me stronger." A Joyous Adventure. We are all on a sacred journey of life. Appreciation of its beauty becomes a natural consequence to the dive towards the Deeper Self in us. This book deals with both the esoteric and practical aspects of our venerable journey. It puts forth pensive pointers for reflection and self-awareness. Human beings are externalized - hooked on to the outer aspects of life such as material possessions, fame, identification with a nation, religion or the like, and so on. This is creating a lot of unhappiness to the individual and, therefore, to humanity as a whole. Those who realize this begin to turn inward and indulge in "Athma Vichara" - the Soul Search. "In Quest of The Deeper Self" functions as a wayside companion to them. The noisy mind and its obstruction to the inner dive are brought out clearly. Movement towards the inner silence is portrayed as the essential feature in the quest for the Deeper Self. In the process of this movement, a pervasive background serenity is discovered. To lead one's daily life from that serenity somehow makes it all very meaningful. A number of cryptic paradigms are given to highlight the key aspects of the inward journey. Personal and planetary transformations are looked into as also the deceptive pursuit of individual salvation. While presenting issues for serious reflection, this book puts forth a rather uncommon pointer that frivolity and light-hearted attitudes play a healthy role in the movement towards the Deeper Self. Such legendary figures as Sherlock Holmes and Tarzan too perform their little dances in this presentation. Enjoy the book and the journey towards the Self!

Homicide Jul 22 2022 "Homicide: Towards a Deeper Understanding offers an in-depth analysis into the phenomenon of homicide, examining different types of homicide and how

these types have changed over time. Based on original analysis on Scottish data, this book draws upon an international body of research to contextualize the findings in a global setting, filling an important gap in the homicide literature pertaining to the relationship between trends in homicide and violence. Examining homicide from gendered as well as Gothic perspectives, this book also relates homicide to novel, critical theory. The book covers a thorough description of different types of homicide, including sexual homicide, and provides an explorative approach to the identification of homicide subtypes. The book also explores how these findings relate to current homicide theory, and proposes a new theoretical framework to gain a deeper understanding of this crime. The main argument of the book is that if homicide and its relationship to wider violence is to be fully understood, theoretically as well as empirically, this crime needs to be disaggregated in a way that reflects the underlying data. Overall, this book therefore fills an important gap in criminological literature, providing an in-depth understanding of one of the most serious violent crimes"--

Towards Understanding Environmental Impact

Aug 19 2019

Machine Learning Paradigms Dec 03 2020 At

the dawn of the 4th Industrial Revolution, the field of Deep Learning (a sub-field of Artificial Intelligence and Machine Learning) is growing continuously and rapidly, developing both theoretically and towards applications in increasingly many and diverse other disciplines. The book at hand aims at exposing its reader to some of the most significant recent advances in deep learning-based technological applications and consists of an editorial note and an additional fifteen (15) chapters. All chapters in

the book were invited from authors who work in the corresponding chapter theme and are recognized for their significant research contributions. In more detail, the chapters in the book are organized into six parts, namely (1) Deep Learning in Sensing, (2) Deep Learning in Social Media and IOT, (3) Deep Learning in the Medical Field, (4) Deep Learning in Systems Control, (5) Deep Learning in Feature Vector Processing, and (6) Evaluation of Algorithm Performance. This research book is directed towards professors, researchers, scientists, engineers and students in computer science-related disciplines. It is also directed towards readers who come from other disciplines and are interested in becoming versed in some of the most recent deep learning-based technological applications. An extensive list of bibliographic references at the end of each chapter guides the readers to probe deeper into their application areas of interest.

Beyond CLIL Jul 30 2020 If education is to prepare learners for lifelong learning, there needs to be a shift towards deeper learning: a focus on transferable knowledge and problem-solving skills alongside the development of a positive or growth mindset. In this book, a follow up to CLIL, the authors review new developments in the understanding of the interface between language and learning, and propose an original new 'pluriliteracies' approach which refines and develops current thinking in CLIL. It aims to facilitate deeper learning through an explicit focus on disciplinary literacies, guiding learners towards textual fluency, encouraging successful communication across cultures, and providing a key stepping-stone towards becoming responsible global citizens. It both provides strong theoretical grounding, and shows how to put that understanding into practise. Engaging and practical, this book will be invaluable to both academics and education practitioners, and will enable conventional classrooms to be transformed into deeper learning ecologies.

Towards Deep Subjectivity Sep 19 2019

Towards a General Theory of Deep

Downturns Oct 13 2021 Joseph Stiglitz examines the theory behind the economic downturns that have plagued our world in recent times. This fascinating three-part lecture

acknowledges the failure of economic models to successfully predict the 2008 crisis and explores alternative models which, if adopted, could potentially restore a stable and prosperous economy.

Deep Work Jan 04 2021 Read the Wall Street Journal Bestseller for "cultivating intense focus" for fast, powerful performance results for achieving success and true meaning in one's professional life (Adam Grant, author of Give and Take). Deep work is the ability to focus without distraction on a cognitively demanding task. It's a skill that allows you to quickly master complicated information and produce better results in less time. Deep Work will make you better at what you do and provide the sense of true fulfillment that comes from craftsmanship. In short, deep work is like a super power in our increasingly competitive twenty-first century economy. And yet, most people have lost the ability to go deep-spending their days instead in a frantic blur of e-mail and social media, not even realizing there's a better way. In Deep Work, author and professor Cal Newport flips the narrative on impact in a connected age. Instead of arguing distraction is bad, he instead celebrates the power of its opposite. Dividing this book into two parts, he first makes the case that in almost any profession, cultivating a deep work ethic will produce massive benefits. He then presents a rigorous training regimen, presented as a series of four "rules," for transforming your mind and habits to support this skill. 1. Work Deeply 2. Embrace Boredom 3. Quit Social Media 4. Drain the Shallows A mix of cultural criticism and actionable advice, Deep Work takes the reader on a journey through memorable stories-from Carl Jung building a stone tower in the woods to focus his mind, to a social media pioneer buying a round-trip business class ticket to Tokyo to write a book free from distraction in the air-and no-nonsense advice, such as the claim that most serious professionals should quit social media and that you should practice being bored. Deep Work is an indispensable guide to anyone seeking focused success in a distracted world. An Amazon Best Book of 2016 Pick in Business & Leadership Wall Street Journal Business Bestseller A Business Book of the Week at 800-CEO-READ

A Holy Nothingness Dec 23 2019 A Holy Nothingness details the remarkable odyssey of traveling the inner terrain through the use of creativity and the imagination. By engaging in a practice she now calls Creative Tantra, the author slowly dissolved the threshold between the unconscious and the conscious mind. As a result, the life-giving waters of the unconscious rushed in with a collection of personal and universal images. These images were so brilliant and captivating that her awareness sank deeper and deeper into the boundless unconscious of the psyche. The deeper awareness went, the more she dissolved the boundaries within until she became witness to and united with a holy nothingness, that sacred emptiness from which this One Life flows. Dissolving the boundaries within meant deepening into the cradle of creativity, discovering the deepest part of her being, and crossing a different kind of ocean - the inner one. In an age where meditation, yoga, and other inward searching practices have become popular, anyone who also has a regular practice of creativity such as writing, painting, sculpting, or dancing might experience the powerful forces of the unconscious and find guidance, insight, and support in this book.

Abstracts of Manuscripts Submitted in 1989 for Publication

Mar 06 2021 This volume contains the abstracts of manuscripts submitted for publication during calendar year 1989 by the staff and students of the Woods Hole Oceanographic Institution. We identify the journal of those manuscripts which are in press or have been published. The volume is intended to be informative, but not a bibliography. The abstracts are listed by title in the Table of Contents and are grouped into one of our five departments, marine policy, or the student category. An author index is presented in the back to facilitate locating specific papers.

Deep-sea Corehead Camera Photography and Piston Coring Jan 24 2020 Cameras were mounted in a newly designed corehead of a piston corer and used to photograph coring operations during 36 stations on CHAIN cruise 75 and 28 stations on ATLANTIS II cruise 42. Through the analysis of these photographs, the deep-water operation of a piston corer during its descent, tripping, impact with the bottom, and ascent has been studied, providing information

on the corer's stability, effectiveness in obtaining a bottom sample, and influence on the nearby sea-floor. Accurate determinations of the amount of penetration were possible, allowing comparisons to be made with the more indirect methods of determining penetration and with the length of core recovered. Sediment clouds produced by bottom currents were noticed in many of the bottom photographs. A number of suggestions are made for future piston coring operations. (Author).

Pursuit Oct 01 2020 Oh, that God would show us the emptiness and vanity of this present world! We still have eternity to come face-to-face with God's judgment-judgment that will bring into account every secret thing we have done. How can we be so deceived, so lost, and so focused on our short time here on earth? My desire is for us to live this life in a way that we invest in eternity. In Pursuit, author Ruth Conlon urges her readers to pursue a passionate and active relationship with God. The book will draw believers into a deeper, more intimate relationship with God. Ruth sheds biblical light on topics such as obedience, prayer, and legalism that will spur readers to run after God in a fervent and determined way. Pursuit will inspire readers to dig deep into God's Word and fervently pursue Him in prayer and fasting. In Pursuit students of the Bible will have the tools to develop the kind of relationship that will enable them to keep their lamps filled with oil so they will be ready when the Bridegroom comes again. Anyone who longs for a profound relationship with Jesus will be well equipped to do so after reading Pursuit.

eThekwini's Green and Ecological Infrastructure Policy Landscape Jun 21 2022 This book offers the reader a deeper understanding of the eThekwini Metropolitan Municipality's green and ecological infrastructure policy landscape. The author utilises the PULSE3 analytical framework to conduct an in-depth examination and to show how experts frame and implement the municipality's green and ecological infrastructure strategies and projects. Although the initial purpose of this book was to investigate the role of green and ecological infrastructures in eThekwini's water security aspirations, the author realised that climate change adaptation and mitigation play a more

central role in motivating the municipality to develop and implement such science-driven projects. To be sure, science that is informed by a positivist paradigm, guides how, where and when the municipality should develop green and ecological infrastructures. Furthermore, a positivistic stance is generated in this policy landscape, where science and politics meet at a local government level, and the book offers an insight into the science-policy interface, as well as the normative and value orientations that positivism often ignores. The book also shows the usefulness of the PULSE3 framework and how it can assist scientists in all fields to gain a deeper understanding of the complications that are faced by humankind. This book fills a market gap by providing a view of how scientists think about problems and how to solve them by using established paradigms and theories.

Kindergarten, Sloyd and Classroom Teacher Trainees' Self-directed Learning, Metacognitive Regulation and Web-based Support Jan 16 2022
Tiivistelmä: Lastentarhan-, käsityön- ja luokanopettajaopiskelijoiden itseohjautuva oppiminen, oppimisen metakognitiivinen säätely ja niiden web-pohjainen tukeminen.

Towards a Deeper Understanding of Consciousness Aug 23 2022 In the World Library of Psychologists series, international experts themselves present career-long collections of what they judge to be their finest pieces - extracts from books, key articles, salient research findings, and their major practical theoretical contributions. In this volume Max Velmans reflects on his long-spanning and varied career, considers the highs and lows in a brand new introduction and offers reactions to those who have responded to his published work over the years. This book offers a unique and compelling collection of the best publications in consciousness studies from one of the few psychologists to treat the topic systematically and seriously. Velmans' approach is multi-faceted and represents a convergence of numerous fields of study - culminating in fascinating insights that are of interest to philosopher, psychologist and neuroscientist alike. With continuing contemporary relevance, and significant historical impact, this collection of works is an essential resource for all those engaged or interested in the field of

consciousness studies and the philosophy of the mind.

Deep Learning to See Apr 26 2020 The remarkable progress in computer vision over the last few years is, by and large, attributed to deep learning, fueled by the availability of huge sets of labeled data, and paired with the explosive growth of the GPU paradigm. While subscribing to this view, this work criticizes the supposed scientific progress in the field, and proposes the investigation of vision within the framework of information-based laws of nature. This work poses fundamental questions about vision that remain far from understood, leading the reader on a journey populated by novel challenges resonating with the foundations of machine learning. The central thesis proposed is that for a deeper understanding of visual computational processes, it is necessary to look beyond the applications of general purpose machine learning algorithms, and focus instead on appropriate learning theories that take into account the spatiotemporal nature of the visual signal. Serving to inspire and stimulate critical reflection and discussion, yet requiring no prior advanced technical knowledge, the text can naturally be paired with classic textbooks on computer vision to better frame the current state of the art, open problems, and novel potential solutions. As such, it will be of great benefit to graduate and advanced undergraduate students in computer science, computational neuroscience, physics, and other related disciplines.

Towards Deep Understanding Of Elementary School Mathematics: A Brief Companion For Teacher Educators And Others Nov 14 2021

The book is intended to serve as a brief companion for mathematical educators of elementary teacher candidates who learn mathematics within a college of education both at the undergraduate and graduate levels. Being informed by mathematics teaching and learning standards of the United States, Australia, Canada, Chile, England, Japan, Korea, Singapore, and South Africa, the book can be used internationally. The teaching methods emphasize the power of visualization, the use of physical materials, and support of computer technology including spreadsheet, Wolfram Alpha, and the Geometer's Sketchpad. The basic

ideas include the development of the concepts of number, base-ten system, problem solving and posing, the emergence of fractions in the context of simple real-life activities requiring the extension of whole number arithmetic, decimals, percent, ratio, geoboard geometry, elements of combinatorics, probability and data analysis. The book includes historical aspects of elementary school mathematics. For example, readers would be interested to know that two-sided counters stem from the binary system with its genesis in the 1st millennium BC China of which Leibnitz (17th century) was one of the first notable proponents. The genesis of the base-ten arithmetic is in the Egyptian mathematics of the 4th millennium BC, enriched with the positional notation with the advent of Hindu-Arabic numerals in the 12th century Europe.

Advances in Machine Learning/Deep Learning-based Technologies May 28 2020 As the 4th Industrial Revolution is restructuring human societal organization into, so-called, "Society 5.0", the field of Machine Learning (and its sub-field of Deep Learning) and related technologies is growing continuously and rapidly, developing in both itself and towards applications in many other disciplines. Researchers worldwide aim at incorporating cognitive abilities into machines, such as learning and problem solving. When machines and software systems have been enhanced with Machine Learning/Deep Learning components, they become better and more efficient at performing specific tasks. Consequently, Machine Learning/Deep Learning stands out as a research discipline due to its worldwide pace of growth in both theoretical advances and areas of application, while achieving very high rates of success and promising major impact in science, technology and society. The book at hand aims at exposing its readers to some of the most significant Advances in Machine Learning/Deep Learning-based Technologies. The book consists of an editorial note and an additional ten (10) chapters, all invited from authors who work on the corresponding chapter theme and are recognized for their significant research contributions. In more detail, the chapters in the book are organized into five parts, namely (i) Machine Learning/Deep Learning in Socializing and Entertainment, (ii) Machine Learning/Deep

Learning in Education, (iii) Machine Learning/Deep Learning in Security, (iv) Machine Learning/Deep Learning in Time Series Forecasting, and (v) Machine Learning in Video Coding and Information Extraction. This research book is directed towards professors, researchers, scientists, engineers and students in Machine Learning/Deep Learning-related disciplines. It is also directed towards readers who come from other disciplines and are interested in becoming versed in some of the most recent Machine Learning/Deep Learning-based technologies. An extensive list of bibliographic references at the end of each chapter guides the readers to probe further into the application areas of interest to them.

Towards a Deeper Commitment to the New Society Sep 24 2022

Talking paediatric surgery Apr 19 2022 Il volume raccoglie gli esiti di una pluriennale ricerca sul tema della efficacia della comunicazione fra Medico e Paziente (nello specifico, in ambito pediatrico), dove per comunicazione non si intende la mera funzione verbale dell'interazione, ma tutti i livelli della prossemica, dal linguaggio del corpo, alla scelta dei termini, intonazione, ascolto, atteggiamento reciproco, nell'intenzione di fornire uno strumento utile al raggiungimento di una modalità ottimale ed efficiente nei colloqui durante le visite. "As it is widely known, communication is not limited to a verbal interaction between two or more interlocutors; rather, it occurs at a multiplicity of levels, including proxemics, body language, and the characteristics of the space where communicative interactions occur. [...] The purpose of the research is to ascertain if there exists a pattern to the paediatric surgical visit, if there are moments of the interaction when problematic points usually occur, and, if so, why they occur, how they are revealed, and if it would be possible to avoid them or, at least, to reduce their effects on the interaction itself. Therefore, an analysis of real interactions in a medical settings is performed in order to ascertain how information is exchanged between the surgeon and the parents, and to what extent the way the information is conveyed affects the interactions". [from the Introduction by I. Martini].

Towards a Deeper Understanding of Consciousness Dec 27 2022 In the World Library of Psychologists series, international experts themselves present career-long collections of what they judge to be their finest pieces - extracts from books, key articles, salient research findings, and their major practical theoretical contributions. In this volume Max Velmans reflects on his long-spanning and varied career, considers the highs and lows in a brand new introduction and offers reactions to those who have responded to his published work over the years. This book offers a unique and compelling collection of the best publications in consciousness studies from one of the few psychologists to treat the topic systematically and seriously. Velmans' approach is multi-faceted and represents a convergence of numerous fields of study - culminating in fascinating insights that are of interest to philosopher, psychologist and neuroscientist alike. With continuing contemporary relevance, and significant historical impact, this collection of works is an essential resource for all those engaged or interested in the field of consciousness studies and the philosophy of the mind.

Memoirs Jun 28 2020

Growing Deeper Nov 02 2020 ARE YOU LOOKING FOR A TOOL TO HELP STRENGTHEN YOUR RELATIONSHIP WITH GOD? Refresh your heart, mind and soul with this daily spiritual journal that helps answer the desire for something to help strengthen your intimacy with God. Discover this inspirational user-friendly devotional to engage your faith on a very personal level. Every day provides a portion of Scripture to meditate on and a challenge that can be directly applied to your life. Once you've studied God's Word, there are questions and specific actions to help challenge you to put feet to your faith. You'll also be provided ample journaling space to record your thoughts and how God is teaching and drawing your heart into a relationship with Him. This journal is designed to renew your soul, strength and develop deep roots in your faith and then take your faith to the streets to apply your faith in the world. So, let's jump in, dive deeper and start living out what you believe.

Desiring God Jun 09 2021 Insightful and heart-warming, this classic book is written for those who seek to know God better. It unfolds life-impacting, biblical truths and has been called a "soul-stirring celebration of the pleasures of knowing God."

Five Points Nov 26 2022 Grace is the heart of God to do you good when you deserve it least. But do we really know how deeply we don't deserve it? Only God can reveal that to us. He does it through the Bible. And when he does, the wonders of his grace explode with brightness as never before. These Five Points are about how Christians come into being, and how we are kept forever. It reaches back into times past when we were freely chosen. It reaches forward into the future when we will be safe and happy forever. It reaches down into the mysteries of the work of Christ, purchasing the gift of faith for all God's children. And it reaches into the human soul, glimpsing the mysteries of the Spirit's work as he conquers all our rebellion and makes us willing captives of King Jesus. Piper believes that our experience of grace grows with our grasp of God's gracious work. He invites us to come with him on this quest.

Enlightening Of Perspectives - (A Deep Check Towards Reality) May 08 2021 Most of

us might have suffered a lot in silence. Sometimes we must have also misunderstood people, places, circumstances, and even destiny as well. "Pessimistic thoughts are devilish whereas an optimistic mindset is the real intrinsic asset behind a fruitful outcome." Problems, obstacles, and the agony a person has can be of many reasons. The Mindful fact that one has to recognize the consequences and must be aware of real life glorifies a person's living by application of his/her broadened intellect. Life is not just about being professional or just being personal. It is a combination of both. You will endure and learn in every aspect. In fact, without learning and without having visionary perception there will be something that seems to be missing or empty in life. Keeping in mind everyone and every single thing, Author Asra Noorin has written this book in a very simplified language with the usage of clear vocabulary that it should be very easier for her readers to understand. Asra has specifically added her impact of words in everything she has written in connection to the reality everybody faces. This book is going to connect you with emotions, motivation, and guidance throughout. The reality is going to hit you deep and you will be certainly moved by the way the author has depicted it. Asra has also written 10 pages of this book in Telugu and Hindi language trying to make her words reach effectively into the hearts of people. Deeper City Feb 05 2021 Deeper City is the first major application of new thinking on 'deeper complexity', applied to grand challenges such as runaway urbanization, climate change and rising inequality. The author provides a new framework for the collective intelligence - the capacity for learning and synergy - in many-layered cities, technologies, economies, ecologies and political systems. The key is in

synergistic mapping and design, which can move beyond smart 'winner-takes-all' competition, towards wiser human systems of cooperation where 'winners-are-all'. Forty distinct pathways 'from smart to wise' are mapped in Deeper City and presented for strategic action, ranging from local neighbourhoods to global finance. As an atlas of the future, and resource library of pathway mappings, this book expands on the author's previous work, *City-Region 2020*. From a decade of development and testing, Deeper City combines visual thinking with a narrative style and practical guidance. This book will be indispensable for those seeking a sustainable future - students, politicians, planners, systems designers, activists, engineers and researchers. A new postscript looks at how these methods can work with respect to the 2020 pandemic, and asks, 'How can we turn crisis towards transformation?'
