While some are beneficial, others are harmful and can cause significant economic, environmental, and health damage. This study, requested by the U.S. House Merchant Marine and Fisheries Committee, examined State and Federal policies related to these harmful NIS. The report is presented in 10 chapters. Chapter 1 identifies the issues and options related to the topic and a summary of the findings from the individual chapters that follow. Chapters 2 "The Consequences of NIS" and 3 "The Changing Numbers, Causes, and Rates of Introductions" examine basic aspects of NIS, their effects, how many there are, and how they get here. Technologies to deal with harmful NIS, including decision-making methods and techniques for preventing and managing problem species, are covered in chapters 4 "The Application of Decisionmaking Methods" and 5 "Technologies for Preventing and Managing Problems." Chapters 6, "A Primer on Federal Policy," 7 "State and Local Approaches from a National Perspective," and 8 "Two Case Studies: Non-Indigenous Species in Hawaii and Florida" assess what various institutions at the Federal, State, and local levels do, or fail to do, about NIS. Chapters 9 and 10 place NIS in a broader context by examining their relationships to genetically engineered organisms, to international law to other prominent environmental issues, and to choices regarding the future of the nation's biological resources. Appendixes include: lists of boxes, figures, and tables in the document; list of authors, workshop participants, reviewers, and survey respondents for the study; and list of references by chapter. Additional sections contain an index to common and scientific names of species, and a general index. (MDH) Foodborne illness is a major public health problem despite improvement of food protection programs in the United States. Sound regulations and day-to-day compliance by food service operators are essential for effective food protection programs. The purpose of the program is to protect food against contamination, ensure food soundness, and meet consumer expectations. The food service program should cover public, semi-public and limited food service establishments. Requirements for temporary food service establishments should be modified concerning physical facilities. Recommendations for conducting an effective food sanitation program include staff competency and training; public relations; working with other agencies and groups; attending to administrative, industry, and financial considerations; program evaluation; and ensuring supportive facilities and equipment. In depth explanations of the FDA Food Service Sanitation Ordinance (1976 Recommendations) are given. With a Haynes manual, you can do it yourself! From simple maintenance to basic repairs.
