This proceedings book presents selected contributions from the XVIII Congress of APDIO (the Portuguese Association of Operational Research) held in Valença on June 28–30, 2017. Prepared by leading Portuguese and international researchers in the field of operations research, it covers a wide range of complex real-world applications of operations research methods using recent theoretical techniques, in order to narrow the gap between academic research and practical applications. Of particular interest are the applications of, nonlinear and mixed-integer programming, data envelopment analysis, clustering techniques, hybrid heuristics, supply chain management, and lot sizing and job scheduling problems. In most chapters, the problems, methods and methodologies described are complemented by supporting figures, tables and algorithms. The XVIII Congress of APDIO marked the 18th installment of the regular biannual meetings of APDIO – the Portuguese Association of Operational Research. The meetings bring together researchers, scholars and practitioners, as well as MSc and PhD students, working in the field of operations research to present and discuss their latest works. The main theme of the latest meeting was Operational Research Pro Bono. Given the breadth of topics covered, the book offers a valuable resource for all researchers, students and practitioners interested in the latest trends in this field. Ecological economics can help create the future that most people want – a future that is prosperous, just, equitable and sustainable. This forward-thinking book lays out an alternative approach that places the sustainable wellbeing of humans and the rest of nature as the overarching goal. Each of the book’s chapters, written by a diverse collection of scholars and practitioners, outlines a research and action agenda for how this future can look and possible actions for its realisation. Catchment Hydrological Modelling: The Science and Art covers various methods (and equations) for modeling all components of a CHM. Readers are presented with multiple methods and approaches to modeling the same component, allowing them to distinguish the differences between methods. The books also provides a clear understanding of what makes some commonly used hydrological models similar or different and what their strengths and weaknesses may be. This comprehensive guide contains questions and answers in each chapter, along with concepts and detailed equations that are fundamental to understanding CHM. This book is useful to students and professionals in the fields of catchment and hydrology, as well as environmental and civil engineers. Includes practical advice on developing and/or applying CHM models, empowering readers to do so themselves Presents practical aspects of catchment modeling, from model structure design to model operation Presents hydrological catchment modeling in a clear and coherent way while also describing different approaches for the same processes This manual presents the theoretical foundations to productivity measurement, and discusses implementation and measurement issues. As a low-lying delta region with a high population density, the Netherlands has long focused on the prevention of flooding catastrophes and the reclamation of valuable land. The evolution of Dutch water governance, beginning with the creation of local 'water boards' in the Middle Ages and growing into a complex infrastructure of polders, dams, and controlled waterways offers a compelling study of pitfalls and successes within one of the worlds most challenging regions for water management. Water Policy in the Netherlands traces the arc of water governance in the country, from technological innovations to prevent wide-scale flooding, to strategies focused primarily on improving water quality, to an integral water management approach which brings together perspectives from economics, hydrology, ecology, water law, and water technology. The contributions in this book demonstrate how both the technical and social sciences must play key roles in crafting policy in the face of serious environmental challenges including climate change, sea level rise, and increasing soil subsidence. Innovative themes explored in the work include: how economic models and pricing structures might improve efficiency in the distribution of water resources, how the competing uses for water-including for recreation, arable agriculture, fisheries, and natural preservation-create demands on both the quantity and quality of water resources, and how public participation, cogovernance, and the balance of public and private interests will be necessary to meet the goals of the EUs Water Framework Directive. This resource serves as both an invaluable case study and as a text to develop the analytical tool of integral water management for students, policy-makers, and NGO professionals in developed and developing regions. This Guide to Measuring the Information Society is a compilation of concepts, definitions, classifications and methods for information society measurement and analysis. It is more possible than ever to influence and shape our working environments, our experience of work and each other. Business leaders who set the conditions and create engaging, meaningful work through organisational design and use of the knowledge and creative potential of their workforces are engaging in smart working. In Smart Working: Creating the Next Wave, Anne Marie McEwan explains how smart working is more than just flexible and mobile working. It is about flexibility and autonomy - how people work, not just where and when. She argues that systems, working environments and governance are more likely to lead to effective performance if they maximise self-determination and choice. She describes how collaborative communication technologies create possibilities for stimulating and harnessing collective intelligence, within and beyond organisational boundaries. In short, smart working is an outcome of designing organisational systems that are good both for business and people. McEwan warns that the tendency to talk about new management paradigms risks overlooking insights derived from years of academic research, and particularly from lessons learned from process innovation methodology. This rigorously researched but intensely practical book examines current workplace trends relating to people, technology, place and space. It reviews what we already know about effective management and high performance work methods and shows how those insights can be used to advantage in contemporary workscapes. It will help those with responsibilities for the strategic direction of their organizations. Learning and development and HR professionals will understand how to interpret these insights for their own business. exam 640-721 This book describes applications of the AdS/CFT duality to the "real world." The AdS/CFT duality is an idea that originated from string theory and is a powerful tool for analyzing strongly-coupled gauge theories using classical gravitational theories. In recent years, it has been shown that one prediction of AdS/CFT is indeed close to the experimental result of the real quark–gluon plasma. Since then, the AdS/CFT duality has been applied to various fields of physics; examples are QCD, nuclear physics, condensed-matter physics, and nonequilibrium physics. The aim of this book is to provide background materials such as string theory, black holes, nuclear physics, condensed-matter physics, and nonequilibrium physics as well as key applications of the AdS/CFT duality in a single volume. The emphasis throughout the book is on a pedagogical and intuitive approach focusing on the underlying physical concepts. It also includes step-by-step computations for important results, which are useful for beginners. This book will be a valuable reference work for graduate students and researchers in particle physics, general relativity, nuclear physics, nonequilibrium physics, and condensed-matter physics. The five-volume set LNCS 11536, 11537, 11538, 11539, and 11540 constitutes the proceedings of the 19th International Conference on Computational Science, ICCS 2019, held in Faro, Portugal, in June 2019. The total of 65 full papers and 168 workshop papers presented in this book set were carefully reviewed and selected from 573 submissions (228 submissions to the main track and 345 submissions to the workshops). The papers were organized in topical sections named: Part I: ICCS Main Track Part II: ICCS Main Track; Track of Advances in High-Performance Computational Earth Sciences: Applications and Frameworks; Track of Agent-Based Simulations, Adaptive Algorithms and Solvers; Track of Applications of Matrix Methods in Artificial Intelligence and Machine Learning; Track of Architecture, Languages, Compilation and Hardware Support for Emerging and Heterogeneous Systems Part III: Track of Biomedical and Bioinformatics Challenges for Computer Science; Track of Classifier Learning from Difficult Data; Track of Computational Finance and Business Intelligence; Track of Computational Optimization, Modelling and Simulation; Track of Computational Science in IoT and Smart Systems Part IV: Track of Data-Driven Computational Sciences; Track of Machine Learning and Data Assimilation for Dynamical Systems; Track of Marine Computing in the Interconnected World for the Benefit of the Society; Track of Multiscale Modelling and Simulation; Track of Simulations of Flow and Transport: Modeling, Algorithms and Computation Part V: Track of Smart Systems: Computer Vision, Sensor Networks and Machine Learning; Track of Solving Problems with Uncertainties; Track of Teaching Computational Science; Poster Track ICCS 2019 Chapter "Comparing Domain-decomposition Methods for the Parallelization of Distributed Land Surface Models" is available open access under a Creative Commons Attribution 4.0 International License via link.springer.com.
