Connect the dots is not just child's play. For adults, it is therapeutic and brain-boosting too! Adults who can connect the dots are known to be forward-thinkers and they have the ability to piece together information to understand the whole picture. When adults connect the dots, they retain information, follow instructions and better their focus too! Jones and George are dedicated to the challenge of "Making It Real" for students. As a team, they are uniquely qualified to write about the organizational challenges facing today's managers. No other author team in the management discipline matches their combined research and text-writing experience. Essentials of Management concisely surveys current management theories and research. Through a variety of real world examples from small, medium, and large companies the reader learns how those ideas are used by practicing managers. The organization of this text follows the mainstream functional approach of planning, organizing, leading, and controlling; but the content is flexible and encourages instructors to use the organization they are most comfortable with. The themes of diversity, ethics, and information technology are clearly evident through in-text examples, photographs, "unboxed" stories, and the end-of-chapter material - all areas of importance that truly serve to bring to life the workplace realities that today's student will encounter in the course of a career. This book constitutes the proceedings of the fourth meeting in a series of topical conferences dealing with the process of nuclear fission, mainly at low excitation energy. Two chapters deal with the characteristics of one of the major fission observables, i.e. the fission fragments. The book also gives due attention to an often-neglected aspect of fission, the so-called ternary fission (i.e. fission accompanied by a charged light particle). Another chapter deals with fission barriers and cross sections and the link with astrophysics. Special attention is also given to recent applications such as accelerator-driven systems and transmutation. The last chapter discusses various interesting aspects of nuclear fission. Clear and engaging, peppered with relevant case histories, this book would make an important addition to anyone's EMDR-related book collection." -- Dr. Robin Logie, EMDR UK & Ireland This book is the first to bring together in one volume an overview of the principal issues in treatment of dissociative disorders in complex PTSD, and a description of the integration of specific EMDR-related interventions or "tools" with other psychotherapeutic treatments. These tools can significantly extend the therapeutic power of EMDR-related methods. Each intervention is examined in detail with accompanying transcripts illustrating the nuances and variations in how the intervention is applied. It is written by a highly esteemed EMDR scholar, trainer, international speaker, and author who is an EMDRIA-designated "Master Clinician." The book discusses how the concepts and vocabulary of other models of dissociation (particularly the Theory of Structural Dissociation of the Personality, and the Internal Family Systems model) translate directly into EMDR's Adaptive Information Processing language. It presents detailed descriptions of specific EMDR-related tools that are useful in facilitating and safely accelerating therapeutic progress with clients suffering from Complex PTSD. These include such standard EMDR procedures as Trauma Processing and Resource Installation, several conceptual/cognitive/phenomenological models of dissociative personality structures and symptoms, and specific EMDR interventions for resolving dysfunctionally stored post-traumatic elements. The book will be of great value to therapists who wish to extend their use of basic EMDR with "easier" clients to using it effectively with more complex clients. Key Features: Provides a theoretical framework to guide assessment and treatment of clients with Complex PTSD Serves as a "hands-on" resource for using specific EMDR procedures Describes each intervention in detail, illustrating the nuances and variations in different applications Includes specific "AIP" tools, actual therapy scripts, and client drawings Covers DSM-V PTSD criteria The first step to reading is to recognize the alphabet. This third edition of the highly successful and well-regarded Australian adaptation of Frank and Bernanke's Principles of Microeconomics by Sarah Jennings (University of Tasmania) takes a rigorous, theoretical treatment that is suitable for mid to high-level courses but is nonetheless easy-to-follow and logical. It is full of practical examples and in-chapter exercises that allow students to check their understanding of the important concepts as they work through the chapter. New to this edition: the chapters on competitive advantage and the open economy have been merged into a single chapter and the former chapter 1 has been moved online for a more streamlined text that covers all the important elements of introductory microeconomics. Indifference curve analysis has also been introduced for this edition. Background Briefing and Thinking as an Economist vignettes provide significant links between economic theory and the real world, and up-to-date data present students with a snapshot of the economy as it is right now. This text is for first-year students of economics or those taking it as a first subject in microeconomics. The authors take an active learning approach. They suggest that the only way to learn to hit an overhead smash in tennis or to speak a foreign language is through repeated practice. The same is true for learning economics. Throughout this book you will find new ideas introduced with simple examples, followed by applications showing how they work in familiar settings. The features within each chapter are designed to both test and reinforce the understanding of these ideas. "Connect is a four-level, four-skills American English course for young adolescents. The only screenwriting book that includes a DVD that contains performances of the short films and screenplays that are featured in the book! The beauty and power of any story lies in its

ability to connect to the reader, listener, or observer. *Crafting Short Screenplays That Connect* is the first screenwriting guide to introduce connection as an essential, although essentially overlooked, aspect of creating stories for the screen and of the screenwriting process itself. Written with clarity and humor, this book teaches the craft of writing short screenplays by guiding the student through carefully focused writing exercises of increasing length and complexity. Eight award-winning student screenplays are included for illustration and inspiration. The text is divided into three parts. Part one focuses on preparing to write by means of exercises designed to help students think more deeply about the screenwriter's purposes; their own unique vision, material and process; and finally about what screenplays are at their simplest and most profound level--a pattern of human change, created from specific moments of change--discoveries and decisions. Part two teaches students how to craft an effective pattern of human change. It guides them through the writing and re-writing of "Five (Not So Easy) Pieces"--five short screenplays of increasing length and complexity--focusing on a specific principle of dramatic technique: The Discovery, The Decision, The Boxing Match, The Improbable Connection, and The Long Short Screenplay. Part Three presents the five screenplays used throughout the book to illustrate the dramatic principles that have been discussed, and includes interviews with the screenwriters, a look at where they are now and what they are doing, and brief discussion of how each film evolved.
