Kennewick Man May 03 2020 Kennewick Man, known as the Ancient One to Native Americans, has been the lightning rod for conflict between archaeologists and indigenous peoples in the United States. A decade-long legal case pitted scientists against Native American communities and highlighted the shortcomings of the Native American Graves and Repatriation Act (NAGPRA), designed to protect Native remains. In this volume, we hear from the many sides of this issue—archaeologists, tribal leaders, and others—as well as views from the international community. The wider implications of the case and its resolution is

explored. Comparisons are made to similar cases in other countries and how they have been handled. Appendixes provide the legal decisions, appeals, and chronology to allow full exploration of this landmark legal struggle. An ideal starting point for discussion of this case in anthropology, archaeology, Native American studies, and cultural property law courses. Sponsored by the World Archaeological Congress.

Proteases and Their Receptors in Inflammation Dec 10 2020 Proteases are everywhere from prokaryotes to eukaryotes, from virus to bacteria and in all human tissues, playing a role in many biological functions. Among these functions, the inflammatory reaction is of particular interest. In inflamed tissues, proteases can have a microbial and/or host origin and are involved not only in tissue remodeling, but also in specific signaling to resident or inflammatory cells, thereby contributing to the innate immune response. This volume presents all advances in our knowledge of the role proteases and their inhibitors play in various diseases associated with inflammatory response. Mechanisms involved in protease signaling to cells are presented, and the different types of proteases that are present at inflammatory sites and their effects on the course of inflammation are discussed. Finally, the evidence for considering proteases and their receptors as potential molecular targets for therapeutic interventions in the treatment of inflammatory diseases is discussed in the context of specific organ inflammatory pathologies (the lung, gastrointestinal tract, skin, joints, etc.).

Travel Guide To Europe, 1492 Jun 15 2021 On the eve of the five hundredth anniversary of the discovery of the Americas, it bears remembering that in 1492, as Columbus was making his historic voyage, Europe was flourishing, at the very height of the Renaissance that transformed a continent. In art, politics, commerce, and society, the medieval world had given way to the modern era. But what was Europe really like then? What did London, Paris, Rome, and the other great centers of culture actually look like, and what was it like to travel from one to the other when the horse and the sailing ship were the most expeditious means available? How long would a typical journey take? Where would one stay and what could one eat along the way? And whom might one expect to meet? Both kings and pilgrims, to be sure. In *Travel Guide to Europe 1492*, the noted Italian historian Lorenzo Camusso offers modern-day readers and would-be adventurers ten itineraries for trips commonly taken in both the near and far reaches of fifteenth-century Europe. Whether Camusso's wayfarer is an ambitious young banker on the road From Florence to Bruges; the great painter Albrecht Dürer on his way from Nuremberg to Venice, a shipbuilder whose highly prized craft takes him from Seville to Antwerp via Barcelona, Beaune, and Paris; or a lonely pilgrim wandering from Vézelay to far-off Santiago de Compostela, he offers a vivid account of what such a journey would be like--the sights, sounds, perils, and pleasures--and in so doing he renders the very fabric of day-to-day life during this momentous era in Europe's history.
