Trigger Point Self-Care Manual Aug 31 2020 A guide to the treatment of pain from common sports injuries and other physical activities • Contains at-home techniques to promote healing and self-awareness of the body's musculature • Explains how to relieve pain using manual massage in conjunction with small physio balls • Includes an illustrated treatment reference section organized by region of the body The vast majority of physical injuries incurred by active people begin with muscular injuries that are not addressed by the conventional medical approach to orthopedic care. Injuries of this type are generally too minor to warrant splinting, casting, or medication and often do not prevent participation in physical activities. They do, however, produce noticeable discomfort and, over time, frequently lead to more severe injuries. In *Trigger Point Self-Care Manual* Donna Finando presents methods for the healing and prevention of musculature injuries. She identifies the causes of and remedies for areas of muscular tightness and restriction and details many self-care techniques, including precise self-massage, stretching, and the use of wet heat and/or ice. In the fully illustrated reference section, organized by body part, she identifies the pain associated with trigger points in each muscle of the body and provides instructions for palpating, treating, and stretching the muscle in order to release it.

**Manual of Free-Hand Penmanship (Classic Reprint)** Dec 27 2022 Excerpt from *Manual of Free-Hand Penmanship* IN this little Manual we have sought to give in very brief compass the best method of teaching writing. Other manuals have their excellences; but they are generally so scientific and elaborate, that the practical teacher is discouraged, and soon throws them aside. In presenting this, we presume on the teacher's knowledge of the art of teaching, and only give what is needed for this special branch. We have condensed in it the results of years of practical experience in the public schools; and have endeavored to put it in such a simple, practical, and convenient shape, that the teacher can take it in his left hand, and illustrate with his right on the board. The art of teaching writing is no mystery: it is simply about the hardest work the teacher has to do; and for this simple reason, that the results are visible and permanent. If the teachings of this little book are followed, we will warrant the most satisfactory results. We might apologize for the homely character of the language used in the description of the letters. Some may mock at it; but remember that it is meant for little children between eight and nine years old. If you have hitherto been using a complicated, scientific, abstract system of elements and principles with them, all we can say is, Try this method, and we are satisfied to abide by your verdict. There is an old proverb, Let those laugh that win. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Moreover, each section contains a synopsis and pre-operative checklist. The overlay-technique merges high-quality-photographs with drawings and precisely illustrates the step-to-step descriptions of the different flap harvesting techniques, making this manual in pocket size an unique and accessible reference for both doctors in training and specialists in the field of otolaryngology, head and neck, plastic, maxillofacial and skull base surgery.

**Air Entrainment in Free-surface Flow** Jan 04 2021 This monograph is aimed at the practising hydraulic engineer. Work on it commenced at Professor Naudascher's instigation in 1982. Over the next six years all or some of the authors discussed progress at IAHR sponsored conferences at Esslingen, Melbourne, Lausanne and Beijing. With the authors scattered throughout the world, and all with other responsibilities, progress was bound to be slow. Completion was further delayed by the great increase in published technical literature in this area over the period 1982-1988. This literature continues to expand and with it our understanding of the air water flow phenomena. The monograph must therefore be seen as the authors' views on the state of the art around 1988. More recent references have been included for completeness. This monograph has been a joint effort with most authors making suggestions and contributions to more than one chapter. Nevertheless, the chapter authors are primarily responsible for the material in their chapters. Throughout the monograph symbols are defined when they are first introduced and a list of symbols is included at the end of each chapter. Many other people have contributed to this monograph, but the authors would particularly like to acknowledge the assistance given by Professor John McNown who has read, commented on and improved the style of the complete monograph.
