Volume four in a series that will become the definitive reference to the Porsche 911, the world's favourite Porsche. This volume continues the story of the 3.2 litre Carrera series, and goes on to cover the 959 production car and the last of the air-cooled 911s. A process of continuous evolution has kept the 911 fresh for nearly 40 years, while impeccable build quality has ensured that most of even the very earliest cars have survived as desirable and usable classics. This is the fourth volume of a set of books which will chronicle in definitive depth the history of the evergreen 911, from the earliest design studies to the water-cooled cars of today. Also deals with various specials and competition cars from the period. This survey examines the vibrant academic literature on environmental, social, and governance (ESG) investing. While there is no consensus on the exact list of ESG issues, responsible investors increasingly assess stocks in their portfolios based on nonfinancial data on environmental impact (e.g., carbon emissions), social impact (e.g., employee satisfaction), and governance attributes (e.g., board structure). The objective is to reduce exposure to investments that pose greater ESG risks or to influence companies to become more sustainable. One active area of research at present involves assessing portfolio risk exposure to climate change. This literature review focuses on institutional investors, which have grown in importance such that they have now become the largest holders of shares in public companies globally. Historically, institutional investors tended to concentrate their ESG efforts mostly on corporate governance (the "G" in ESG). These efforts included seeking to eliminate provisions that restrict shareholder rights and enhance managerial power, such as staggered boards, supermajority rules, golden parachutes, and poison pills. Highlights from this section: · There is no consensus on the exact list of ESG issues and their materiality. · The ESG issue that gets the most attention from institutional investors is climate change, in particular their portfolio companies' exposure to carbon risk and "stranded assets." · Investors should be positioning themselves for increased regulation, with the regulatory agenda being more ambitious in the European Union than in the United States. Readers might come away from this survey skeptical about the potential for ESG investing to affect positive change. I prefer to characterize the current state of the literature as having a "healthy dose of skepticism," with much more remaining to be explored. Here, I hope the reader comes away with a call to action. For the industry practitioner, I believe that the investment industry should strive to achieve positive societal goals. CFA Institute provides an exemplary case in its Future of Finance series ([www.cfainstitute.org/research/future-finance](http://www.cfainstitute.org/research/future-finance)). For the academic community, I suggest we ramp up research aimed at tackling some of the open questions around the pressing societal goals of ESG investing. I am optimistic that practitioners and academics will identify meaningful ways to better harness the power of global financial markets for addressing the pressing ESG issues facing our society.
