Introduction to Flat Panel Displays describes the fundamental physics and materials of major flat panel display technologies including LED, OLED, LCD, PDP and FED and reflective displays. A reference for graduate students and new entrants to the display industry, the book currently covers the basic science behind each display technology and gives solved problems and homework problems in each chapter to aid self-study. With advancements in this field, there is enough change in the FPD industry to justify a second edition. This book offers the latest information on modern display technology and features new developments in OLED materials including phosphorescent, TTA, and TADF OLEDs, white light OLED and light extraction. It provides key information on blue phase, automotive lighting, quantum-dot enhanced LCDS, device configurations and performance, and LEDs, specifically nitrate-based. Application features include OLED for mobile, TV, light and flexible OLED, and reflective display specifically e-paper technology and low power consumption displays. Miscreations are things that should not exist, but do. An event happens that transforms an entity into something so amazingly good or so horribly evil that you can't help but be fascinated by its existence. Scribings, Vol 4: Miscreations contains twelve stories from the Greater Portland Scribists that explore these oddities. Errors in evolution. Discoveries in supposedly clean rooms. Extreme memory loss. Appliances that are a little too smart. Mythical beasts reborn. And one joke that went way too far. From the steamy highlands and sapphire watered islands of Sabah and Sarawak, to the mesmerising mosques and mysticism of the Sultanate of Brunei, the island of Borneo is a wonder world of colourful tribal cultures, exotic rainforest creatures. Straddling the Equator, and swept in by various Seas and Straits, it is home to the orang-utan, long-nosed beer-bellied proboscis monkeys, and otherworldly carnivorous plants straight out of Lord of the Rings. The latest edition of the Bradt Travel Guide to Borneo provides fully updated insider information for touring the island including regional capitals, rural outposts and National Parks. This book covers all of the aspects necessary to the design and manufacturing of OLED displays. Topics include emission mechanism, material selection, device processing, manufacturing issues and countermeasures and display design basics. In addition, the book defines elements of OLED such as Thin Film Transistor (TFT) backplane design and processing details, including Low Temperature Poly Silicon (LTPS) process and circuit integration, and high yield method to manufacturer. Researchers and developers are aiming at making large OLED televisions and companies such as Samsung and Apple are rumored to be using OLED display for new screens. In addition to discussing the current composition of OLED, the book also covers the future for OLED technologies and displays. The Society for Information Display (SID) is an international society, which has the aim of encouraging the development of all aspects of the field of information display. Complementary to the aims of the society, the Wiley-SID series is intended to explain the latest developments in information display technology at a professional level. The broad scope of the series addresses all facets of information displays from technical aspects through systems and prototypes to standards and ergonomics Singapore's leading tech magazine gives its readers the power to decide with its informative articles and in-depth reviews. The sultanate's economy continues to enjoy the benefits of petroleum wealth, which has provided budget surpluses in most years and served as a backbone for growth. However, planning is well under way for an era in which oil will not be the main economic driver, with the twin goals of diversification and creating an increased number of private sector jobs at the top of the government's current agenda. Indeed, in recent years, the non-OPEC oil exporter's economy has been undergoing a steady transformation, reorienting from oil toward a more diverse set of service and industry-based economic activities. So far, progress has been promising. In 2011 oil and gas accounted for 38.8% of GDP. With the continuation of higher-than-expected energy prices in 2012, the government has increased economic investments accordingly. These investments, which include infrastructure, social programmes and small-business development, are aimed toward better preparing the country for its post-fossil fuel future. Nikkei Microdevices' 2006 report on flat panel display (FPD) industry includes: -Exclusive in-depth interviews with 28 top executives in the industry -Over 250 information-packed figures, tables and pictures -Proprietary intelligence not available anywhere else In 2006, competitive conditions in the flat panel display (FPD) industry will change significantly. The era in which competition was primarily based on increasing investment and glass substrate sizes is over. Henceforth, overall capability, including parts/material strategy and equipment strategy, will become the decisive factor. By 2010, parts and material costs will account for 80% of the total cost of large-size LCD panels, which will drive future market expansions; thus, parts and materials will make up most of the value addition in panels. Leading panel makers are starting to reinforce their cooperative relationships with parts and material makers, as well as with equipment makers. Contains information on product uses of TV picture tubes and other cathode-ray tubes. Includes an analysis of the basic factors affecting trends in consumption, production and trade of TV picture tubes and other cathode-ray tubes, as well as those bearing on the competitiveness of the industry in domestic and foreign markets. Research and development on liquid crystal display (LCD) backlight technologies are becoming increasingly important due to the fast growth of the LCD business. Backlight technologies contribute to functional improvements of LCDs in terms of wide colour reproduction, uniformity improvements of luminance and colour temperature, high luminance, long life, less power consumption, thinner backlight unit, as well as cost. As LCD panel technology progresses, the lighting technology that provides the illumination for the panel must similarly evolve. LCD Backlights is written by a global panel of leading researchers and practitioners in this field from both academia and industry. The first part of LCD Backlights details the variety of applications of backlights including those in LCD-TV, PC monitors and mobile devices. The second part is a full examination of the different light sources that are used including the latest technological trends in amongst others, cold cathode fluorescent lamps (CCFLs), mercury-free fluorescent lamps and light emitting diodes (LEDs). The final part of the book analyses the optical component of backlights such as diffusers and brightness enhancement films. Key features: Provides a comprehensive analysis of the latest status of LCD backlight research and development. Discusses the design considerations and technical requirements for the multiple applications of LCD backlights. Considers techniques used for power saving and picture quality improvement. Examines the requirements for backlight units used for TVs, PC monitors and mobile phones. LCD Backlights is of significant interest to practising electronics and display engineers as well as scientists working on the development of liquid crystal displays. This book is also of value to graduate students and researchers involved in display technologies. 'This unique book offers a series of case studies about how technology creation has evolved in China. This is an in-depth perspective about the trajectory and the entrepreneurial transformations of some successful high-tech Chinese companies in different industries. The book pictures as well the roles played by government, universities and companies in fostering regional systems of innovation in different parts of China. Written by Chinese and foreign experts, those views are not partial; authors reveal an untruncated and thorough analysis.' Dominique Jolly, SKEMA Business School, France Bringing technologies to the market, thereby creating profits, high-qualified jobs and industrial upgrading is one of the means by which China can fuel its brand new growth model based on innovation and sustainability. Much is known about the mechanisms of technological entrepreneurship. But how does this happen in China? Who is doing what? Is there a 'Chinese way' to do technological entrepreneurship? This thought-provoking book provides readers with a closer look at these issues and clarifies them through a number of case studies discussed from the perspectives of both Chinese and international contributors. Technological Entrepreneurship in China offers a comprehensive and practical assessment of technological entrepreneurship in China. Exclusively based on cases, the book tackles the issues of technological entrepreneurship in China from a systemic view. In so doing the book provides an account of the main factors at work behind Chinese technological entrepreneurship and their interplay, the past and present transitions facing Chinese technology-based enterprises, and how those transitions were and are being dealt with. It offers a glimpse in a huge natural experiment that will prove insightful for both scholars and policymakers.
