"Duik is a free script for the Animation software Adobe After Effects. It eases character, props, and camera animation. Duik creates rigs which allow the animator to manipulate the characters in a very intuitive way. Created in 2009 in France, very simple at its beginning, Duik is now very complete and has an international success; it is used to create TV series, advertising, motion design, video games, music videos, short movies and feature films. It is used in many companies all around the world. Duik is free software (open source), since its creation, and the new version Duik Bassel, was financed by a crowdfunding campaign which was a great success in the beginning of 2017. This success allowed a complete renovation with a lot of new features and improvements, while creating a large international community of users."--Back cover An introduction to digital video editing explains how to use Adobe's Premiere 6.5 to import and manage clips, work with timelines, trim scenes, transition, mix audio, build titles, and fade and blend images. Every human being is born with an extraordinary set of inner resources, including intelligence, attention, mind, imagination, consciousness, willpower, love, and emotion. Strangely, most people pass through young-adulthood and 13+ years of schooling without ever formally learning about any one of these innate capacities. As a result, a vast majority of folks spend their days harnessing only a small fraction of the great potential that is freely available within them.The User's Guide to Being Human is the first owner's manual to comprehensively examine the inner tools with which people shape their lives. Merging art with science, this book illuminates 16 core capacities that enable people to bring out the best in themselves, their activities and relations. It offers step-by-step coaching for all who wish to master the ongoing art of personal development. A companion workbook provides additional support for the exercises and Personal Growth Project. Arnold Arnold is an advanced cross-platform rendering library, or API, used by a number of prominent organizations in film, television, and animation, including Sony Pictures Imageworks. It was developed as a photo-realistic, physically-based ray tracing alternative to traditional scanline based rendering software for CG animation. Arnold uses cutting-edge algorithms that make the most effective use of your computer's hardware resources: memory, disk space, multiple processor cores, and SIMD/SSE units. The Arnold architecture was designed to easily adapt to existing pipelines. It is built on top of a pluggable node system; users can extend and customize the system by writing new shaders, cameras, filters, and output driver nodes, as well as procedural geometry, custom ray types and user-defined geometric data. The primary goal of the Arnold architecture is to provide a complete solution as a primary renderer for animation and visual effects. However, Arnold can also be used as: A ray server for traditional scanline renderers. A tool for baking/procedural generation of lighting data (lightmaps for videogames). An interactive rendering and relighting tool. Arnold Arnold is an advanced cross-platform rendering library, or API, developed by Solid Angle and used by a number of prominent organizations in film, television and animation, including Sony Pictures Imageworks. It was developed as a photo-realistic, physically-based ray tracing alternative to traditional scanline based rendering software for CG animation. Arnold uses cutting-edge algorithms that make the most effective use of your computer's hardware resources: memory, disk space, multiple processor cores, and SIMD/SSE units. The Arnold architecture was designed to easily adapt to existing pipelines. It is built on top of a pluggable node system; users can extend and customize the system by writing new shaders, cameras, filters and output driver nodes, as well as procedural geometry, custom ray types and user-defined geometric data. The primary goal of the Arnold architecture is to provide a complete solution as a primary renderer for animation and visual effects. However, Arnold can also be used as: a ray server for traditional scanline renderers a tool for baking/procedural generation of lighting data (lightmaps for videogames) an interactive rendering and relighting tool Why is Arnold different? Arnold is a highly optimized, unbiased, physically-based 'Monte Carlo' ray / path tracing engine. It doesn't use caching algorithms that introduce artifacts like photon mapping and final gather. It is designed to efficiently render the increasingly complex images demanded by animation and visual effects facilities while simplifying the pipeline, infrastructure requirements and user experience. Arnold provides interactive feedback, often avoiding the need for many render passes and allowing you to match on-set lighting more efficiently. By removing many of the frustrating elements of other renderers, Arnold fits better with your work-flow, produces beautiful, predictable and bias-free results, and puts the fun back into rendering! What is wrong with algorithms like photon mapping or final gather? Such algorithms attempt to cache data that can be re-sampled later, to speed up rendering. However in doing so, they use up large amounts of memory, introduce bias into the sampling that cause visual artifacts. They also require artists to understand the details of how these algorithms work in order to correctly choose various control settings in order to get any speed up at all without ruining the render. Worse than that, these settings are almost always affected by other things in the scene, so it's often possible to accidentally use settings for the cache creation / use that make things worse, not better, or that work fine in one situation but are terrible in another, seemingly similar, situation. In short, they are not predictable, other than for very experienced users, and require artists to learn way too much about the algorithms in order to gain any benefit. At Solid Angle, we believe that your time is more valuable than your computer's time; why spend an extra 30 minutes working with photon mapping or final gather settings, even if it saves 30 minutes render time (and more often than not it doesn't). That's still 30 minutes not spent modeling, animating or lighting. Apple iPhone is appreciated worldwide for Its Style, Ease of Use, and High Technology Brand. Do You Used to "Think Different"?
