Manhattan for Rent, 1785-1850 Feb 05 2021 On the social forces behind the formation of the city's housing market and its relations to the development of a capitalist economy.

Annotation copyrighted by Book News, Inc., Portland, OR

Streetcar Suburbs Feb 23 2020 In the last third of the nineteenth century Boston grew from a crowded merchant town, in which nearly everybody walked to work, to the modern divided metropolis. The street railway created this division of the metropolis into an inner city of commerce and slums and an outer city of commuters' suburbs.

Streetcar Suburbs tells who built the new city, and why, and how. Included here is a new Introduction that considers the present suburb/city dichotomy and suggests what we can learn from it to assure a livable city of the future.

Private Neighborhoods and the Transformation of Local Government May 28 2020 From 1980 to 2000, half the new housing in the United States was built in a development project governed by a neighborhood association. More than 50 million Americans now live in these associations. In *Private Neighborhoods and the Transformation of Local Government*, Robert Nelson reviews the history of neighborhood associations, explains their recent explosive growth, and speculates on their future role in American society. Unlike many previous studies, Nelson takes on the whole a positive view. Neighborhood associations are providing the neighborhood environment controls desired by the residents, high quality common

services, and a stronger sense of neighborhood community. Identifying significant operating problems, Nelson proposes new options for improving the future governance of neighborhood associations.

The Tenant Movement in New York City, 1904-1984 Aug 19 2019

From Cottage to Bungalow Nov 21 2019 "In this book, Joseph C. Bigott challenges many common assumptions about the origins of modern housing. For example, most studies of this period maintain that the prosperous middle-class housing market produced innovations in housing and community design that filtered down to the lower ranks much later.

Building The Dream Dec 23 2019 For Gwendolyn Wright, the houses of America are the diaries of the American people. They create a fascinating chronicle of the way we have lived, and a reflection of every political, economic, or social issue we have been concerned with. Why did plantation owners build uniform cabins for their slaves? Why were all the walls in nineteenth-century tenements painted white? Why did the parlor suddenly disappear from middle-class houses at the turn of the century? How did the federal highway system change the way millions of Americans raised their families? Building the Dream introduces the parade of people, policies, and ideologies that have shaped the course of our daily lives by shaping the rooms we have grown up in. In the row houses of colonial Philadelphia, the luxury apartments of New York City, the prefab houses of Levittown, and the public-housing towers of Chicago, Wright discovers revealing clues to our past and a new way of looking at such contemporary issues as integration, sustainable energy, the needs of the elderly, and how we define "family."

Magnetic Los Angeles Oct 01 2020 Suburban development is often considered synonymous with enhanced personal

mobility, single-family housing, and life cycle homogeneity. According to this view, individual suburbs are residence-only enclaves, isolated commuter-sheds for a managerial and mercantile elite. *Magnetic Los Angeles* challenges this common vision of the expanding, twentieth-century city as the sprawling product of dispersion without planning, lacking any discernable order.

Smarter Growth Nov 02 2020 Critically examines government land use policies and, taking a market-oriented approach, explores the alternatives.

Entrepreneurial Vernacular May 08 2021 During the 1920s, enterprising realtors, housing professionals, and builders developed the models that became the inspiration for the subdivision tract housing now commonplace in the U.S. Originally published in 2001. Suburban subdivisions of individual family homes are so familiar a part of the American landscape that it is hard to imagine a time when they were not common in the U. S. The shift to large-scale speculative subdivisions is usually attributed to the period after World War II. In *Entrepreneurial Vernacular: Developers' Subdivisions in the 1920s*, Carolyn S. Loeb shows that the precedents for this change in single-family home design were the result of concerted efforts by entrepreneurial realtors and other housing professionals during the 1920s. In her discussion of the historical and structural forces that propelled this change, Loeb focuses on three typical speculative subdivisions of the 1920s and on the realtors, architects, and building-craftsmen who

designed and constructed them. These examples highlight the "shared set of planning and design concerns" that animated realtors (whom Loeb sees as having played the "key role" in this process) and the network of housing experts with whom they associated. Decentralized and loosely coordinated, this network promoted home ownership through flexible strategies of design, planning, financing, and construction which the author describes as a new and "entrepreneurial" vernacular.

The Rise of the Community Builders Jun 28 2020 This is a reprint of a 1987 book * It is to be hand scanned, so as not to destroy the text or cover, and returned to Beard Books. The book deals with the evolution of real estate development in the United States, focusing on the rise of planned communities common in the American suburbs since the 1940s.

Living Downtown Jan 24 2020 From the palace hotels of the elite to cheap lodging houses, residential hotels have been an element of American urban life for nearly two hundred years. Since 1870, however, they have been the target of an official war led by people whose concept of home does not include the hotel. Do these residences constitute an essential housing resource, or are they, as charged, a public nuisance? *Living Downtown*, the first comprehensive social and cultural history of life in American residential hotels, adds a much-needed historical perspective to this ongoing debate. Creatively combining evidence from biographies, buildings and urban neighborhoods, workplace records, and housing policies, Paul Groth provides a definitive analysis of life in four price-differentiated types of downtown residence. He demonstrates that these hotels have played a valuable socioeconomic role as home to both long-term residents and temporary laborers. Also, the convenience of hotels has made them the residence of choice for a surprising number of Americans, from hobo author Boxcar Bertha to Calvin Coolidge. Groth examines the social and cultural objections to hotel households and the increasing efforts to eliminate them, which have led to the seemingly irrational destruction of millions of such housing units since 1960. He argues convincingly that these efforts have been a leading

contributor to urban homelessness. This highly original and timely work aims to expand the concept of the American home and to recast accepted notions about the relationships among urban life, architecture, and the public management of residential environments.

The ARRL Antenna Compendium Jan 16 2022 The premiere volume includes articles on a multiband portable, quads and loops, baluns, the Smith Chart, and more.

Building the Workingman's Paradise Mar 26 2020 This innovative and absorbing book surveys a little known chapter in the story of American urbanism—the history of communities built and owned by single companies seeking to bring their workers' homes and place of employment together on a single site. By 1930 more than two million people lived in such towns, dotted across an industrial frontier which stretched from Lowell, Massachusetts, through Torrance, California to Norris, Tennessee. Margaret Crawford focuses on the transformation of company town construction from the vernacular settlements of the late eighteenth century to the professional designs of architects and planners one hundred and fifty years later. Eschewing a static architectural approach which reads politics, history, and economics through the appearance of buildings, Crawford portrays the successive forms of company towns as the product of a dynamic process, shaped by industrial transformation, class struggle, and reformers' efforts to control and direct these forces.
