Microdomains in Polymer Solutions May 20 2022 In the first half of this century,  
great strides were made in understanding the behavior of polymers in dilute  
solutions or in the solid state. Concentrated solutions, on the other hand, were  
commonly regarded as mainly of interest to practitioners, being too complex for the  
rigorous application of statistical theory. Given the preoccupation with the

isolated polymer molecule and the attendant focus on the state of infinite dilution, it is not surprising that aggregation, and inter-polymer association in general, was the bugaboo of experimentalists. These attitudes have changed remarkably over the last few decades. The application of scaling theory to polymer solutions has stimulated investigation of the semi-dilute state, and the region between infinite dilution and swollen gel is no longer perceived as terra incognita. New techniques, such as dynamic light scattering, have proven to be of much value in such investigations. At the same time, it has become clear that consideration of strong inter- and intra-polymer forces, superimposed on the familiar description of the statistical chain, is prerequisite to the application of polymer science to numerous systems of interest. Paramount among these, of course, are biopolymers, their complexes and assemblies. The isolated random coil must be viewed as a rarity in nature.

Offshore Geotechnical Engineering      Dec 23 2019 Design practice in offshore geotechnical engineering has grown out of onshore practice, but the two application areas have tended to diverge over the last thirty years, driven partly by the scale of the foundation and anchoring elements used offshore, and partly by fundamental differences in construction and installation techniques. As a consequence offshore geotechnical engineering has grown as a speciality. The structure of Offshore Geotechnical Engineering follows a pattern that mimics the flow of a typical offshore project. In the early chapters it provides a brief overview of the marine environment, offshore site investigation techniques and interpretation of soil behaviour. It proceeds to cover geotechnical design of piled foundations, shallow foundations and anchoring systems. Three topics are then covered which require a more multi-disciplinary approach: the design of mobile drilling rigs, pipelines and geohazards. This book serves as a framework for undergraduate and postgraduate courses, and will appeal to professional engineers specialising in the offshore industry.

Standard Methods of Chemical Analysis: Industrial and natural products and noninstrumental methods, F.J. Welcher, editor. 2 v Jul 10 2021

Smart and Sustainable Planning for Cities and Regions Nov 21 2019 This open access

book offers a selection of research papers and case studies presented at the 3rd international conference "Smart and Sustainable Planning for Cities and Regions", held in December 2019 in Bolzano, Italy, and explores the concept of smart and sustainable planning, including top contributions from academics, policy makers, consultants and other professionals. Innovation processes such as co-design and co-creation help establish collaborations that engage with stakeholders in a trustworthy and transparent environment while answering the need for new value propositions. The importance of an integrated, holistic approach is widely recognized to break down silos in local government, in particular, when aimed at achieving a better integration of climate-energy planning. Despite the ongoing urbanization and polarization processes, new synergies between urban and rural areas emerge, linking development opportunities to intrinsic cultural, natural and man-made landscape values. The increasing availability of big, real-time urban data and advanced ICT facilitates frequent assessment and continuous monitoring of performances, while allowing fine-tuning as needed. This is valid not only for individual projects but also on a wider scale. In addition, and circling back to the first point, (big) urban data and ICT can be of enormous help in facilitating engagement and co-creation by raising awareness and by providing insight into the local consequences of specific plans. However, this potential is not yet fully exploited in standard processes and procedures, which can therefore lack the agility and flexibility to keep up with the pulse of the city and dynamics of society. The book provides a multi-disciplinary outlook based on experience to orient the reader

in the giant galaxy of smart and sustainable planning, support the transposition of research into practice, scale up visionary approaches and design groundbreaking planning policies and tools.--

Exporting Services May 08 2021 The past two decades have seen exciting changes with developing countries emerging as exporters of services. Technological developments now make it easier to trade services across borders. But other avenues are being exploited: tourists visit not just to sightsee but also to be treated and educated, service providers move abroad under innovative new schemes, and some developing countries defy traditional notions by investing abroad in services. "Exporting Services: A Developing Country Perspective" takes a brave approach, combining exploratory econometric analysis with detailed case studies of representative countries: Brazil, Chile, the Arab Republic of Egypt, India, Kenya, Malaysia, and the Philippines. Two questions lead the analysis: How did these developing countries succeed in exporting services? What policy mix was successful and what strategies did not deliver the expected results? The analysis evaluates the role of three sets of factors: First, the fundamentals, which include a country's factor endowments, infrastructure, and institutional quality; second, policies affecting trade, investment, and labor mobility in services; and third, proactive policies in services designed to promote exports or investment. The case studies illustrate the complex nature of reforms and policy making in the service sector as well as the benefits of well-implemented reforms. Although success seems to be explained by a set of conditions that are difficult to replicate, common features can also be identified. Several countries have adopted policies to support exports, especially exports of information technology-related services. This resource will be valuable for policy makers, experts, and academics who are engaged in efforts to reform service and investment policies in their own country.

Advances in Modeling and Management of Urban Water Networks Dec 03 2020 The Special Issue on Advances in Modeling and Management of Urban Water Networks (UWNs) explores four important topics of research in the context of UWNs: asset management, modeling

of demand and hydraulics, energy recovery, and pipe burst identification and leakage reduction. In the first topic, the multi-objective optimization of interventions on the network is presented to find trade-off solutions between costs and efficiency. In the second topic, methodologies are presented to simulate and predict demand and to simulate network behavior in emergency scenarios. In the third topic, a methodology is presented for the multi-objective optimization of pump-as-turbine (PAT) installation sites in transmission mains. In the fourth topic, methodologies for pipe burst identification and leakage reduction are presented. As for the urban drainage systems (UDSs), the two explored topics are asset management, with a system upgrade to reduce flooding, and modeling of flow and water quality, with analyses on the transition from surface to pressurized flow, impact of water use reduction on the operation of UDSs, and sediment transport in pressurized pipes. The Special Issue also includes one paper dealing with the hydraulic modeling of an urban river with a complex cross-section.
