**How Children Fail** Jun 19 2022 First published in the mid 1960s, How Children Fail began an education reform movement that continues today. In his 1982 edition, John Holt added new insights into how children investigate the world, into the perennial problems of classroom learning, grading, testing, and into the role of the trust and authority in every learning situation. His understanding of children, the clarity of his thought, and his deep affection for children have made both How Children Fail and its companion volume, How Children Learn, enduring classics.

**Capital Failure** Jun 26 2020 Adam Smith's 'invisible hand' relied on the self-interest of individuals to produce good outcomes. Economists' belief in efficient markets took this idea further by assuming that all individuals are selfish. This belief underpinned financial deregulation, and the theories on incentives and performance which supported it. However, although Adam Smith argued that although individuals may be self-interested, he argued that they also have other-regarding motivations, including a desire for the approbation of others. This book argues that the trust-intensive nature of financial services makes it essential to cultivate such other-regarding motivations, and it provides proposals on how this might be done. Trustworthiness in the financial services industry was eroded by deregulation and by the changes to industry structure which followed. Incentive structures encouraged managers to disguise risky products as yielding high returns, and regulation failed to curb this risk-taking, rent-seeking behaviour. The book makes a number of proposals for reforms of governance, and of legal and regulatory arrangements, to address these issues. The proposals seek to harness values and norms that would reinforce 'other-regarding' behaviour, so that the firms and individuals in the financial services act in a more trustworthy manner. Four requirements are identified which together might secure more strongly trustworthy behaviour: the definition of obligations, the identification of responsibilities, the creation of mechanisms which encourage trustworthiness, and the holding to account of those involved in an appropriate manner. Financial reforms at present lack sufficient focus on these requirements, and the book proposes a range of further actions for specific parts of the financial industry.

*Fail-Safe Management* Nov 19 2019 This book provides guidance on how to avoid the failure of interventions, whether for projects, programs, or policies. The authors note that although good design is essential, 'paying attention to details that only happen during implementation is essential in avoiding failure'. The five steps outlined are salutary, and point to the craft needed for good implementation - the range of issues which have continuously to be managed, the environment, stakeholders, resources, systems, and so on. Some elements are beyond the control of a project manager, but all too often it is the things that are controllable that are ignored at our peril. Good management usually makes the difference between failure and success. This book deserves careful study by public and private sector managers and implementers.

**Government Failure versus Market Failure** Oct 31 2020 When should government intervene in market activity and when is it best to let market forces take their natural course? How does the existing empirical evidence about government performance guide our answers to these questions? In this clear, concise book, Clifford Winston offers his innovative analysis—shaped by thirty years of evidence—to assess the efficacy of government interventions. Markets fail when it is possible to make one person better off without making someone else worse off, thus indicating inefficiency. Governments fail when an intervention is unwarranted because markets are performing well or when the intervention fails to correct a market problem efficiently. Winston concludes from existing research that the cost of government failure may actually be considerably greater than the cost of market failure: "My search of the evidence is not limited to policy failures. I will report success stories, but few of them emerged from my search." The prevalence of market failure is due to a lack of conviction in favor of markets, the inflexibility of intervening government agencies, and political forces that enable certain interest groups to benefit at the expense of society as a whole. Winston suggests that government policy can be improved by making greater use of market-oriented solutions that have already produced benefits in certain situations.

**Why Startups Fail** Oct 23 2022 If you want your startup to succeed, you need to understand why startups fail. "Whether you're a first-time founder or looking to bring innovation into a corporate environment, Why Startups Fail is essential reading."—Eric Ries, founder and CEO, LTSE, and New York Times bestselling author of The Lean Startup and The Startup Way Why do startups fail? That question caught Harvard Business School professor Tom Eisenmann by surprise when he realized he couldn't answer it. So he launched a multiyear research project to find out. In Why Startups Fail, Eisenmann reveals his findings: six distinct patterns that account for the vast majority of startup failures. • Bad Bedfellows. Startup success is thought to rest largely on the founder's talents and instincts. But the wrong team, investors, or partners can sink a venture just as quickly. • False Starts. In following the oft-cited advice to "fail fast" and to "launch before you're ready," founders risk wasting time and capital on the wrong solutions. • False Promises. Success with early adopters can be misleading and give founders unwarranted confidence to expand. • Speed Traps. Despite the pressure to "get big fast," hypergrowth can spell disaster for even the most promising ventures. • Help Wanted. Rapidly scaling startups need lots of capital and talent, but they can make mistakes that leave them suddenly in short supply of both. • Cascading Miracles. Silicon Valley exhorts entrepreneurs to dream big. But the bigger the vision, the more things that can go wrong. Drawing on fascinating stories of ventures that failed to fulfill their early promise—from a home-furnishings retailer to a concierge dog-walking service, from a dating app to the inventor of a sophisticated social robot, from a fashion brand to a startup deploying a vast network of charging stations for electric vehicles—Eisenmann offers frameworks for detecting when a venture is vulnerable to these patterns, along with a wealth of strategies and tactics for avoiding them. A must-read for founders at any stage of their entrepreneurial journey, Why Startups Fail is not merely a guide to preventing failure but also a roadmap charting the path to startup success.

**Why Nations Fail** Sep 10 2021 Brilliant and engagingly written, Why Nations Fail answers the question that has stumped the experts for centuries: Why are some nations rich and others poor, divided by wealth and poverty, health and sickness, food and famine? Is it culture, the weather, geography? Perhaps ignorance of what the right policies are? Simply, no. None of these factors is either definitive or destiny. Otherwise, how to explain why Botswana has become one of the fastest growing countries in the world, while other African nations, such as Zimbabwe, the Congo, and Sierra Leone, are mired in poverty and violence? Daron Acemoglu and James Robinson conclusively show that it is man-made political and economic institutions that underlie economic success (or lack of it). Korea, to take just one of their fascinating examples, is a remarkably homogeneous nation, yet the people of North Korea are among the poorest on earth while their brothers and sisters in South Korea are among the richest. The south forged a society that created incentives, rewarded innovation, and allowed everyone to participate in economic opportunities. The economic success thus spurred was sustained because the government became accountable and responsive to citizens and the great mass of people. Sadly, the people of the north have endured decades of famine, political repression, and very different economic institutions—with no end in sight. The differences between the Koreas is due to the politics that created these completely different institutional trajectories. Based on fifteen years of original research Acemoglu and Robinson marshal extraordinary historical evidence from the Roman Empire, the Mayan city-states, medieval Venice, the Soviet Union, Latin America, England, Europe, the United States, and Africa to build a new theory of political economy with great relevance for the big questions of today, including: - China has built an authoritarian growth machine. Will it continue to grow at such high speed and overwhelm the West? - Are America's best days behind it? Are we moving from a virtuous circle in which efforts by elites to aggrandize power are resisted to a vicious one that enriches and empowers a small minority? - What is the most effective way to help move billions of people from the rut of poverty to prosperity? More philanthropy from the wealthy nations of the West? Or learning the hard-won lessons of Acemoglu and Robinson's breakthrough ideas on the interplay between inclusive political and economic institutions? Why Nations Fail will change the way you look at—and understand—the world.

**Essential Maple** Mar 04 2021 What's in this book This book contains an accelerated introduction to Maple, a computer algebra language. It is intended for scientific programmers who have experience with other computer languages such as C, FORTRAN, or Pascal. If you wish a longer and more leisurely introduction to Maple, see (8, 27, 39). This book is also intended as a reference summary for people who use Maple infrequently enough so that they forget key commands. Chapter 4 is a keyword summary. This will be useful if you have forgotten the exact Maple command for what you want. This chapter is best accessed through the table of contents, since it is organized by subject matter. The mathematical prerequisites are calculus, linear algebra, and some differential equations. A course in numerical analysis will also help. Any extra mathematics needed will be developed in the book. This book was prepared using Maple V Release 3, although most of the examples will work with, at most, only slight modification in Maple V Release 2. This book does not require any particular hardware. The systems I have used in developing the book are machines running IBM DOS and WIN/OS2, Unix machines in an ASCII terminal mode, and x windows systems. There should be no adjustments necessary for readers equipped with Macintoshes or other hardware. Maple is an evolving system. New features will be described in the documentation for updates (?updates in Maple).

**Practical Aspects of Declarative Languages** Apr 05 2021 The International Symposium on Practical Aspects of Declarative Languages (PADL) is a forum for researchers and practitioners to present original work emphasizing novel applications and implementation techniques for all forms of declarative concepts, especially those emerging from functional, logic, and constraint languages. Declarative languages have been studied since the inception of computer science, and continue to be a vibrant subject of investigation today due to their applicability in current application domains such as bioinformatics, network configuration, the Semantic Web, telecommunications software, etc. The 6th PADL Symposium was held in Dallas, Texas on June 18–19, 2004, and was co-located with the Compulog-Americas Summer School on Computational Logic. From the submitted papers, the program committee selected 15 for presentation at the symposium based upon three written reviews for each paper, which were provided by the members of the program committee and additional referees. Two invited talks were presented at the conference. The first was given by Paul Hudak (Yale University) on "An Algebraic Theory of Polymorphic Temporal Media." The second invited talk was given by Andrew Fall (Dowland Technologies and Simon Fraser University) on "Supporting Decisions in Complex, Uncertain Domains with Declarative Languages." Following the precedent set by the previous PADL symposium, the program committee this year again selected one paper to receive the 'Most Practical' award.

*Epic Fail* Feb 03 2021 Pride and Prejudice goes Hollywood in this winning romantic comedy inspired by Jane Austen’s classic. In her teen fiction debut, the author of *Knitting Under the Influence* goes back to high school for a tale of sisters, misinformation, and star-crossed love. Will Elise’s love life be an epic win or an epic fail? At Coral Tree Prep in Los Angeles, who your parents are can make or break you. Case in point: As the son of Hollywood royalty, Derek Edwards is pretty much prince of the school—not that he deigns to acknowledge many of his loyal subjects. As the daughter of the new principal, Elise Benton isn’t exactly on everyone’s must-sit-next-to-at-lunch list. When Elise’s beautiful sister catches the eye of the prince’s best friend, Elise gets to spend a lot of time with Derek, making her the envy of every girl on campus. Except she refuses to fall for any of his rare smiles and instead warms up to his enemy, the surprisingly charming social outcast Webster Grant. But in this hilarious tale of fitting in and flirting, not all snubs are undeserved, not all celebrity brats are bratty, and pride and prejudice can get in the way of true love for only so long.

**Why Smart Executives Fail** Sep 29 2020 Bob Pittman and AOL Time Warner. Jean Marie Messier and Vivendi. Jill Barad and Mattel. Dennis Kozlowski and Tyco. It's an all too common scenario. A great company breaks from the pack; the analysts are in love; the smiling CEO appears on the cover of *Fortune*. Two years later, the company is in flames, the pension plan is bleeding, the stock is worthless. What goes wrong in these cases? Usually it seems that top management made some incredibly stupid mistakes. But the people responsible are almost always remarkably intelligent and usually have terrific track records. Just as puzzling as the fact that brilliant managers can make bad mistakes is the way they so often magnify the damage. Once a company has made a serious mis-step, it often seems as though it can't do anything right. How does this happen? Instead of rectifying their mistakes, why do business leaders regularly make them worse? To answer these questions, Sydney Finkelstein has carried out the largest research project ever devoted to corporate mistakes and failures. In *WHY SMART EXECUTIVES FAIL*, he and his research team uncover-with startling clarity and unassailable documentation-the causes regularly responsible for major business breakdowns. He relates the stories of great business disasters and demonstrates that there are specific, identifiable ways in which many businesses regularly make themselves vulnerable to failure. The result is a truly indispensable, practical, must-read book that explains the mechanics of business failure, how to avoid them, and what to do if they happen.
