Christopher G. Moore's prize-winning series of Bangkok thrillers featuring Vincent Calvino, a disbarred American lawyer turned PI, have been praised for their captivating plots, engaging characters, and insight into the steamy Thai capital. In *Asia Hand*, the second novel in the series, Bangkok is celebrating Chinese

New Year when Calvino's revels are cut short. The body of an American, an acquaintance of Calvino's, has been fished out of the lake in Lumpini Park. Around his neck are a string of wooden amulets, the kind upcountry Thais wear to protect themselves from evil spirits. Only rather than saving Hutton, these have killed him. A freelance cameraman scraping by on the margins, Hutton had photographed something shortly before his death that he thought would make his career. Now the footage—a shocking execution on the Thai/Burmese border—is running repeatedly on CNN, and the rights to Hutton's life story have been sold to a Hollywood producer. But who killed Hutton and why? When Calvino investigates, he collides with a powerful filmmaker and an experienced old Asia hand who knows the terrain as well as our man in Bangkok. It's all Calvino can do to stay alive, and find out who killed his fellow American. A workshop guide to the strip-down, rebuild, maintenance

and repair of two-stroke motorcycle engines. Author Dave Boothroyd covers the principles and practice of two-stroke engine work, examining a wide range of marques and road, racing and trail motorcycles. With over 450 colour photographs, this new book covers: the chronological development of two-stroke engines and workshop procedures for each era; the examination of each major engine component in turn, including cylinder head, piston, piston rings, crankcase, flywheel, bearings, inlet manifold, clutch, gearbox and primary drive, and, finally, racing motorcycles and tuning engines for best performance; diagnosing problems and workshop safety. This practical reference guide is for the two-stroke motorcycle owner or restorer and is illustrated throughout with over 450 colour photographs. This book is an account of the companies and individuals, who have played a major part in the design and advancement of motorcycle frame (chassis) performance. These

independent companies began to spring up in the early postwar years, when motorcycle racing began to take place again. Due to the lack of available factory machines and the urge to improve performance of the now aged equipment, riders began to build their own frames around whatever engines were available. Success brought recognition, and people were soon wanting to buy winning machines, so fledgling companies began to spring up to satisfy the growing demand for custom chassis. Some of these companies soon began to grow, and others appeared in various European countries over the next few years. The state-of-the-art hand built frames were becoming a must for the discerning road bike rider, and so the independent motorcycle frame makers were beginning to put some designs into production, and a thriving business was beginning to emerge. In later years, with such a large choice of factory engines from around the world,

the successful independent chassis manufacturers went from strength to strength and some are now producing highly prized road bikes, whilst building one-off machines as required. As the years have passed, one or two of the independent companies have disappeared, but in many cases their machines have become very collectable classics. The companies still thriving today, as well as producing modern machines with a wide range of engine options, are finding considerable business rebuilding and maintaining machines built in the earlier years. Some of the pioneer builders have become household names to the motorcycle fraternity, and those written about in this book include: Nico Bakker (The Netherlands), Bimota (Italy), Dresda Autos (United Kingdom), Egli (Switzerland), Harris Performance Products (United Kingdom), Hejira racing (United Kingdom), Magni (Italy), Maxton Engineering (United Kingdom), P&M Motorcycles (United

Kingdom), Quasar (United Kingdom), Rickman UK (United Kingdom), Colin Seeley Racing (United Kingdom), Segale (Italy) and Spondon Engineering (United Kingdom). This book charts the history of these innovative companies with full specifications for many chassis, and is extensively illustrated throughout. A must for any motorcycle enthusiast, and a valuable reference for the trade.
