range of materials science that has been brought to bear on providing solutions to the challenges of developing self-healing and protective coatings for a range of metals. The book has a strong emphasis on characterisation techniques, particularly new techniques that are beginning to be used in the coatings area. It features many contributions written by experts from various industrial sectors which examine the needs of the sectors and the state of the art. The development of self-healing and protective coatings has been an expanding field in recent years and applies a lot of new knowledge gained from other fields as well as other areas of materials science to the development of coatings. It has borrowed from fields such as the food and pharmaceutical industries who have used, polymer techniques, sol-gel science and colloidosome technology for a range encapsulation techniques. It has also borrowed from fields like hydrogen storage such as from the development of hierarchical and other materials based on organic templating as "nanocontainers" for the delivery of inhibitors. In materials science, recent developments in high throughput and other characterisation techniques, such as those available from synchrotrons, are being increasing used for novel characterisation – one only needs to look at the application of these techniques in self healing polymers to gauge wealth of new information that has been gained from these techniques. This work is largely driven by the need to replace environmental pollutants and hazardous chemicals that represent risk to humans such as chromate inhibitors which are still used in some applications. Presents a behind-the-scenes look at the

New Mechanisms in Glucose Control presents a clear overviewof the new drugs and treatment therapies that have been developedin recent years to help improve glycaemic management forthe diabetic patient, namely the incretin mimetics (GLP-1 agonists)and DPP-4 inhibitors. It also considers other drug classescurrently in development and undergoing clinical trials includingthe SGLT2 inhibitors and other pipeline products. In addition topharma cotherapeutic agents, the role of bariatric as a managementtool for

diabetes is covered as well as consideration of theorganisation of diabetes care with a community focus. This indispensable pocketbook details the newer treatments andoffers a comparison with more traditional agents includingsulphonyureas, glitazones and insulin. The pros and cons oftraditional therapies are discussed as well as the epidemiology andpathogenesis of type 2 diabetes, helping to give the reader abetter understanding of the disease area and itsmanagement. New Mechanisms in Glucose Control is essential readingfor health professionals working in primary or secondary care andinvolved in treating diabetic patients. Designed for students who have already taken an introductory course in metallurgy or materials science, this advanced text describes how structures control the mechanical properties of metals. "Turning the Tide on Trash ... is an interdisciplinary guide designed to provide maximum flexibility in the classroom." The curriculum guide is designed for use either as a primary tool, or to supplement work in other subject areas. Three teaching units develop concepts on 1) The definition, characteristics, and sources of marine debris; 2) The effects of marine debris; and 3) Developing solutions and spreading the word. Units contain questions regarding the concepts, background information, 'Facts from the Deep', objectives, instructions on activities, vocabulary, materials, learning skills, duration (typically 40 minutes),

necessary reproducibles, and procedures. Academic subject areas encompass art, language arts, mathematics, music, science and social studies. Guide appears to be directed to teachers of upper elementary and middle school students. "There is an apocryphal story of an eminent neurology professor who was asked to provide a differential diagnosis. He allegedly quipped: "I can't give you a differential diagnosis. If you wish I will give you a list of wrong diagnoses followed by the right diagnosis." Sadly, this sort of arrogance pervaded our field, particularly in the era before there were accurate diagnostic methods and effective treatments of neurological diseases. Fortunately, this sort of pomposity is now relegated to the past and remains only as an antique reminder of a type of hubris that precluded discovery and progress in diseases of the nervous system"-- This second edition provides a thorough introduction to the terms and concepts needed to understand ISDN. The book helps readers understand the various types of ISDN services and hardware available and which are right for them. Users will want to know which equipment and software to buy and how to get it set up and running. Tens of thousands of mechanical engineers are engaged in the design, building, upgrading, and optimization of various material handling facilities. The peculiarity of material handling is that there are numerous technical solutions to any problem. The engineer's personal selection of the optimal solution is as critical as the technical component. Michael Rivkin, Ph.D., draws on his decades of experience in design, construction, upgrading, optimization, troubleshooting, and maintenance throughout the world, to highlight

topics such as: • physical principles of various material handling systems; • considerations in selecting technically efficient and environmentally friendly equipment; • best practices in upgrading and optimizing existing bulk material handling facilities; • strategies to select proper equipment in the early phases of a new project. Filled with graphs, charts, and case studies, the book also includes bulleted summaries to help mechanical engineers without a special background in material handling find optimal solutions to everyday problems. PCMag.com is a leading authority on technology, delivering Labs-based, independent reviews of the latest products and services. Our expert industry analysis and practical solutions help you make better buying decisions and get more from technology.
